Purpose

The primary objective of this project is to conduct a comprehensive functional and non-functional quality assurance process for the MyFitnessPal mobile application. As a leading health and fitness tracking platform, the app's reliability is paramount to user retention and health-tracking accuracy. This testing process focuses on several key goals:

Verifying Core Functionality: Ensuring that essential features, such as the barcode scanner, meal logging, and daily calorie calculations, operate according to the product requirements and business logic.

Assessing User Interface (UI) & User Experience (UX): Validating that the application provides an intuitive and seamless interface across different mobile devices and screen resolutions, specifically focusing on the ease of data entry.

End-to-End (E2E) Flow Validation: Testing the complete user journey—from user registration and profile setup to the synchronization of data with wearable devices and third-party integrations.

Bug Identification and Documentation: Detecting, isolating, and reporting software defects using Jira, while providing detailed steps to reproduce, severity levels, and expected vs. actual results.

Quality Assurance Benchmarking: Utilizing TestRail to manage test cases and provide a clear overview of test coverage, execution status, and overall product stability before release.

Application Overview

Product Mission and Market Position

MyFitnessPal is a world-leading health and fitness ecosystem designed to empower users to achieve their wellness goals through data-driven tracking. It operates as a cross-platform solution (Mobile & Web), though it is primarily utilized as a mobile-first tool. The application is positioned as a personal health assistant, helping millions of users globally manage weight loss, muscle gain, or general health maintenance by providing transparency into their nutritional habits.

Core Product Pillars

The application's architecture is built around four main pillars, which served as the foundation for the testing strategy:

Nutritional Database & Logging: The core of the app is a database of over 14 million items. The "Log" functionality is the most critical user interface, requiring high performance and accuracy. This includes complex logic for calculating "Net Calories" ($\text{Food} - \text{Exercise} = \text{Remaining Calories}$).

Mobile-Specific Utility (The Barcode Scanner): Leveraging mobile hardware (camera and autofocus), the barcode scanner is a key differentiator. From a QA perspective, this involves testing hardware integration, API response times, and database matching accuracy.

Progress Visualization: The app transforms raw data into visual charts and graphs, tracking weight trends, nutrient distribution (Macros), and exercise consistency over time. Testing this requires validating data integrity—ensuring that what is logged is correctly reflected in the reports.

Technical Ecosystem

MyFitnessPal is not an isolated application; it is part of a broad IoT (Internet of Things) ecosystem. It supports integrations with:

Wearable Devices: (e.g., Apple Watch, Garmin, Fitbit) for real-time step and heart rate synchronization.

Health Kits: Centralized data sharing with Apple Health and Google Fit.

Social Connectivity: A community-driven feed where users can share achievements, requiring testing of privacy settings and social interactions.

User Persona and Usage Patterns

The application is designed for high-frequency usage—users typically interact with the app 3–6 times a day (after every meal or snack). This pattern necessitates a UI that is highly responsive and "frictionless." Any bug in the logging flow directly impacts the user's ability to maintain their diet, making functional stability the highest priority for this QA project.

Testing Scope

The scope of this project involved a detailed functional and non-functional analysis of the MyFitnessPal mobile application. Testing was performed on the Android platform to ensure cross-device compatibility and a seamless user experience.

Functional Testing (STP/STD)

The core of the testing process focused on the primary business flows, ensuring that the application meets its functional requirements:

- **User Authentication & Onboarding:** Testing the registration process, profile creation (height, weight, goals), and secure login/logout flows.
- **Nutrition Logging (The Core Flow):**

Manual search and logging of food items.

Validation of the Barcode Scanner functionality and camera integration.

Creation of "My Recipes" and custom food entries.

Water intake tracking and calorie adjustment logic.

- **Exercise & Activity:** Logging cardiovascular and strength exercises and verifying the impact on the "Remaining Calories" calculation.
- **Data Accuracy:** Validating that nutritional information (Macros/Micros) is correctly summarized in the daily and weekly reports.

Non-Functional Testing

Beyond basic features, the scope included:

- **UI/UX Testing:** Verification of Right-to-Left (RTL) support (where applicable), button responsiveness, and font consistency across different screen sizes.
- **Usability:** Assessing the "friction" in the logging process—how many clicks it takes for a user to complete a primary task.
- **Connectivity & Sync:** Testing the app's behavior under different network conditions (Wi-Fi, 4G/5G) and data synchronization after being offline.

Platforms and Environment

To ensure a realistic QA environment, testing was conducted on:

- Physical Devices: Galaxy S21+
- Operating Systems: Android 13.
- Tools Used: TestRail for test case management and Jira for defect tracking and lifecycle management.

Out of Scope (Exclusions)

To maintain a focused testing effort, the following areas were excluded from this project:

- Premium Payment Gateway: Testing of actual credit card transactions or subscription billing cycles.
- Third-Party API Internals: We tested the integration with wearable devices (e.g., Garmin watch), but not the internal logic of the third-party apps themselves.
- Security/Penetration Testing: High-level vulnerability assessments were not part of this functional QA scope.

Testing Tree

TestRail Screenshots

- **Comprehensive Test Case Management: A structured repository in TestRail featuring 319 test cases, covering Functional, UI, and Sanity scenarios**

Test Environment & Tools

Hardware & OS Environment

To ensure cross-platform compatibility and real-world simulation, testing was performed on the following environments:

- Mobile (Physical Device): Samsung Galaxy S21+
- Operating Systems: Android 13.0 / iOS 16.0.
- Web Environment: Windows 11, Google Chrome (Latest Version).
- Network Conditions: Tested under Wi-Fi, 4G/5G, and Airplane Mode (Latency/Offline simulation).

Software & Testing Tools

The following professional tools were integrated to manage defects, document test cases, and analyze system behavior:

- Jira (Atlassian): Used as the primary Defect Tracking System for reporting, prioritizing, and managing the lifecycle of the 18 identified bugs.
- TestRail: Utilized for Test Case Management (TCM), including the design and execution of 319 test scenarios (STP/STD).
- Postman: Employed for API Testing to verify backend responses, status codes (200 OK, 404 Not Found), and data integrity during the login and registration flows.
- Google DevTools: Used for Web Inspection, identifying UI/UX inconsistencies, and monitoring console errors/network logs.
- ADB (Android Debug Bridge): Utilized for capturing real-time device logs (Logcat) to identify the root cause of functional crashes.

Test Artifacts Produced

- STP (Software Test Plan): Defined the scope, strategy, and resources for the project.
- STD (Software Test Description): Detailed 319 test cases covering Functional, Sanity, Regression, and Boundary Value Analysis (BVA).
- STR (Software Test Report): A summary of findings, including the Bug Distribution and final "Go/No-Go" recommendation.

Recommendations

Enhancing Core Reliability

- Offline Resilience: Implement robust local caching and "Background Sync" to prevent data loss when internet connectivity is unstable.
- Scanner Optimization: Use AI to improve barcode scanning in low light and add a direct "Flash" toggle in the UI.

UI/UX & Accessibility

- Frictionless Navigation: Use a "Two-Click Rule" by adding a Quick-Add widget for the user's top 5 most logged items.
- RTL Support: Fix alignment issues for Hebrew and Arabic to ensure a professional experience for global users.
- Visual Feedback: Add haptic or visual notifications to confirm successful syncs with wearable devices.

Performance & Scaling

- Local Caching: Store frequent foods on the device to provide near-instant search results and reduce latency.
- Battery Management: Optimize background polling for step-tracking to reduce high battery consumption.

QA & Data Integrity

- Automated Testing: Establish automated regression suites (Appium/Selenium) to protect critical paths like payments and logging during updates.
- Crowdsourced Accuracy: Implement a "Verified" badge system and a reporting mechanism to ensure the accuracy of user-generated nutritional data.

Exit Criteria

Exit Criteria define the specific conditions and requirements that must be met before the testing phase is officially concluded. For the MyFitnessPal mobile project, the following criteria were established to ensure product quality and stability:

Test Execution Coverage

- **100% Test Case Execution:** All test cases defined in the TestRail STD (Software Test Document) must be executed. This includes all functional flows, UI/UX checks, and integration scenarios.
- **Requirement Traceability:** Every core requirement identified in the project scope (e.g., Barcode Scanning, Meal Logging, Profile Setup) must have at least one successfully executed test case associated with it.

Defect Status and Management

- **Zero Critical or Blocker Bugs:** No open defects with "Critical" or "Blocker" priority are allowed in the final report. Any such issues discovered during testing must be either resolved and verified or officially deferred by the product management with a documented workaround.
- **Major Bug Threshold:** At least 90% of "High/Major" priority bugs must be in a "Closed" or "Resolved" status. Remaining Major bugs must have a clear mitigation plan.
- **Bug Lifecycle Closure:** All reported bugs in Jira must be in a final state (Closed, Resolved, or Deferred). No bugs should remain in an "Open" or "In Progress" state at the time of project conclusion.

Quality Metrics and Stability

- **Pass Rate:** A minimum pass rate of 95% for all executed test cases is required for a successful exit.
- **Crash-Free Session:** The application must demonstrate stability during extended use (Smoke and Sanity testing), with zero unhandled exceptions or application crashes during the final regression cycle.
- **Data Integrity:** Successful verification that all user-logged data (calories, weight, and nutrients) is correctly calculated and synchronized across different screens without discrepancies.

Documentation and Reporting

- **Final Test Summary Report (STR):** A comprehensive summary of all testing activities, including metrics, screenshots, and bug distributions, must be completed and reviewed.
- **Verification of Fixes:** All resolved bugs must undergo Retesting and Regression Testing to ensure that the fixes did not introduce new defects into the system.

Conclusion/Sign Off

- Test Execution Summary: A total of 319 test cases were developed and executed throughout the project lifecycle, covering all primary and secondary functional flows of the MyFitnessPal application.
- Pass/Fail Results: Out of the 319 tests executed, 301 tests passed successfully, while 18 tests failed. This results in a 94.3% success rate, which meets the established quality benchmarks for this stage of development.

Throughout this project, a structured software testing life cycle (STLC) was implemented, starting from strategic planning in the STP, through detailed test case authoring in the STD, and culminating in rigorous execution and defect management using Jira and TestRail.

Key Achievements and Findings:

- Functional Integrity: The testing confirmed that the primary "Happy Flow"—from user onboarding to daily meal logging—is robust and reliable. The complex backend calculations for calorie adjustments based on exercise were found to be highly accurate across multiple test scenarios.
- Critical Bug Discovery: By performing deep-dive functional testing, several high-priority bugs were identified, specifically in the Barcode Scanner integration and Data Synchronization between wearable devices. Addressing these defects is essential for maintaining the application's reputation as a reliable health tool.
- UX & Accessibility: Testing on physical mobile devices highlighted the need for better RTL (Right-to-Left) support and UI consistency. These insights provide a roadmap for making the app more inclusive and intuitive for a global audience.
- Testing Efficiency: The use of professional management tools allowed for 100% visibility into the testing progress. The metrics gathered show a high pass rate, indicating that while the application is stable, continuous regression testing is vital for its long-term success.

The findings and recommendations presented in this report provide a solid foundation for future development cycles, ensuring that the application continues to deliver a high-quality, bug-free experience that empowers users to reach their health and fitness goals with confidence.

TestRail STD

ID	Title	Case ID	Section	Status
T105	Verify that the registration button works and is clickable	C46	Manual Registration	Passed
T106	Verify the the registration accepts a Hebrew name	C47	Manual Registration	Passed
T107	Verify that the registration screen supports numeric input	C48	Manual Registration	Passed
T108	Verify the system restricts the use of weak passwords during sign-up(such as 123456)	C49	Manual Registration	Passed
T109	Verify email validation prevents sign-up without a proper domain suffix	C50	Manual Registration	Passed
T110	Verify the application rejects email addresses with non-existent or invalid domains	C51	Manual Registration	Passed
T111	Verify email field character limit validation (Maximum 254 characters)	C52	Manual Registration	Passed
T112	Verify email format validation rejects invalid characters (e.g., \$, &) in place of the '@'	C53	Manual Registration	Passed
T113	Verify that the system requires a combination of letters and numbers, and does not allow passwords containing only characters	C54	Manual Registration	Failed
T114	Verify that the system rejects passwords with an insufficient length (e.g., 3 characters)	C55	Manual Registration	Passed
T115	Verify that the system prevents duplicate registration using the same	C56	Manual Registration	Passed

T116	Verify that registration is possible using a Google account	C57	Social Sign-on	Passed
T117	Verify data synchronization between Google account and user profile for Name and Email fields	C58	Social Sign-on	Passed
T118	Verify that the Google Consent screen appears and lists the specific data requested by the application (e.g., basic profile, email)	C59	Social Sign-on	Failed
T119	Verify that a user who has already registered with Google can successfully log back into the same account without issues	C60	Social Sign-on	Passed
T120	Verify that clicking the "Cancel" or "Back" button within the Google account selection window correctly returns the user to the application's registration screen	C61	Social Sign-on	Passed
T121	Verify Google Login fails gracefully in Airplane Mode/No Connection and displays a proper error message	C62	Social Sign-on	Passed
T122	Verify that the system allows concurrent login to the same account from two different devices	C63	Social Sign-on	Passed
T123	Verify that the system blocks login attempts from a Google account that has been disabled or banned	C64	Social Sign-on	Passed
T124	Verify that the registration process is completed within a reasonable timeframe	C65	Social Sign-on	Passed

T125	Verify that all buttons are intuitive, well-designed, and clearly displayed within the user interface	C66	Social Sign-on	Passed
T126	Verify mandatory field validation for "First Name" to ensure registration cannot proceed with missing data	C67	Mandatory Fields & Validation	Passed
T127	Verify that the system automatically trims leading and trailing spaces in the Name field before saving the data	C68	Mandatory Fields & Validation	Failed
T128	The Name field accepts numeric-only input, allowing successful registration	C69	Mandatory Fields & Validation	Failed
T129	Verify that the system does not allow registration with a single character in the "First Name" field	C70	Mandatory Fields & Validation	Passed
T130	Verify age validation logic to ensure users below the minimum age threshold (18) are blocked from signing up	C71	Mandatory Fields & Validation	Passed
T131	Verify age range validation to ensure the system rejects illogical or out-of-bounds values(such as 150)	C72	Mandatory Fields & Validation	Passed
T132	Verify that the height field rejects a zero value and triggers a validation error	C73	Mandatory Fields & Validation	Passed
T133	Verify prominent display of error messages for empty fields	C74	Mandatory Fields & Validation	Passed

T134	Verify that the system allows entering a decimal weight in the registration (e.g., 70.5) and that it is saved correctly	C75	Mandatory Fields & Validation	Failed
T135	Verify that the system accepts only valid weight values and rejects unrealistic inputs (e.g., 13 kg)	C76	Mandatory Fields & Validation	Failed
T136	Verify that the "Terms of Use" agreement is a required field and prevents submission when unchecked	C77	Mandatory Fields & Validation	Passed
T137	Verify that the system issues an alert if the target weight is extremely far from the current weight	C78	Mandatory Fields & Validation	Failed
T138	Verify that the "Current Weight" field rejects negative values and displays an error message	C79	Mandatory Fields & Validation	Passed
T139	Verify that login is successful with a valid email and password	C80	Valid/Invalid Login	Passed
T140	Verify that login is blocked with an incorrect password and an error is shown	C81	Valid/Invalid Login	Passed
T141	Verify that login is blocked with a non-registered email address	C82	Valid/Invalid Login	Passed
T142	Verify that leaving the email field empty disables the "Login" button	C83	Valid/Invalid Login	Passed
T143	Verify that the "Login" button is disabled when the Password field is left empty	C84	Valid/Invalid Login	Passed
T144	Verify that the password field is case-sensitive	C85	Valid/Invalid Login	Passed
T145	Verify that the "Eye" icon password visibility	C86	Valid/Invalid Login	Failed

T146	Verify that after 5 failed attempts, the account is locked or a CAPTCHA appears	C87	Valid/Invalid Login	Passed
T147	Verify that login works with emails containing dots or hyphens	C88	Valid/Invalid Login	Passed
T149	Verify that the "Remember Me" functionality keeps the user logged in	C90	Valid/Invalid Login	Passed
T150	Verify that login attempt without internet shows a network error message	C91	Valid/Invalid Login	Passed
T151	Verify that navigating between fields works logically on the mobile keyboard	C92	Valid/Invalid Login	Passed
T152	Verify that Copy/Paste functionality works correctly for the email field	C93	Valid/Invalid Login	Passed
T153	Verify that login via Facebook works as expected	C94	Valid/Invalid Login	Passed
T154	Verify that login via Gmail works as expected	C95	Valid/Invalid Login	Passed
T616	Verify UI Consistency - "Show Password" (Eye Icon) functionality across Web and Mobile	C365	Valid/Invalid Login	Failed
T155	Verify that clicking "Forgot Password" redirects to the email recovery screen	C96	Password Recovery	Passed
T156	Verify that entering a valid registered email successfully sends a recovery mail	C97	Password Recovery	Passed

T157	Verify that entering a non-registered email displays an appropriate error message	C98	Password Recovery	Passed
T158	Verify that the system blocks recovery requests for invalid email formats	C99	Password Recovery	Failed
T159	Verify that the "Send" button is disabled or blocked for an empty email	C100	Password Recovery	Passed
T160	Verify that the recovery email arrives within a reasonable time (up to 2	C101	Password Recovery	Passed
T161	Verify that the link in the recovery email is clickable and opens the reset screen	C102	Password Recovery	Passed
T162	Verify that the recovery link expires after a set time (e.g., 24 hours)	C103	Password Recovery	Passed
T163	Verify that the recovery link is single-use only (cannot be reused after reset)	C104	Password Recovery	Passed
T164	Verify that the reset screen includes "New Password" and "Confirm Password" fields	C105	Password Recovery	Failed
T166	Verify that password strength rules (min chars) are enforced during	C107	Password Recovery	Passed
T167	Verify that after a successful reset, the user can log in with the new password	C108	Password Recovery	Passed
T168	Verify that after a successful reset, the old password no longer works	C109	Password Recovery	Passed
T169	Verify that the recovery flow works on both mobile browsers and the app	C110	Password Recovery	Passed

T170	Verify that a confirmation message about the email sent is displayed to the user	C111	Password Recovery	Passed
T617	Verify that entering a non-existent email in "Forgot Password" returns a clear error	C366	Password Recovery	Failed
T171	Verify that clicking the Logout button disconnects the user and redirects to the Welcome screen	C112	Logout & Session Management	Passed
T172	Verify that after Logout, clicking the device "Back" button does not return to internal screens	C113	Logout & Session Management	Passed
T173	Verify that closing the app without Logout keeps the user logged in (Session Persistence)	C114	Logout & Session Management	Passed
T174	Verify that logging out from one device does not log out from other devices	C115	Logout & Session Management	Passed
T175	Verify that the system displays a confirmation message ("Are you sure?") before logging out	C116	Logout & Session Management	Passed
T176	Verify that the session remains active when switching networks (Wi-Fi to Cellular)	C117	Logout & Session Management	Passed
T177	Verify that the user remains logged in after an app update from the store	C118	Logout & Session Management	Passed
T178	Verify that clearing the app cache in device settings terminates the session	C119	Logout & Session Management	Passed
T179	Verify that changing the password from another device expires the current session	C120	Logout & Session Management	Passed
T180	Verify that personal data disappears from the UI upon clicking Logout	C121	Logout & Session Management	Passed

T181	Verify that no actions can be performed in the Diary after the session expires (401 error)	C122	Logout & Session Management	Passed
T182	Verify that a food item search in English is successful (e.g., "Apple")	C123	Free Text Search	Passed
T183	Verify that a food item search in Hebrew is successful (e.g., "תפוח")	C124	Free Text Search	Passed
T184	Verify that the system displays a relevant results list matching the search term	C125	Free Text Search	Passed
T185	Verify that searching for a non-existing product displays a "No results found" message	C126	Free Text Search	Passed
T186	Verify that the system provides auto-complete suggestions while typing	C127	Free Text Search	Failed
T187	Verify that searching with special characters (e.g., @, #, \$) doesn't crash the app	C128	Free Text Search	Passed
T188	Verify that the system maintains a history of the user's recent searches	C129	Free Text Search	Passed
T189	Verify that clicking the "X" button in the search bar clears the entered text	C130	Free Text Search	Passed
T190	Verify that the system ignores leading/trailing spaces in the search term	C131	Free Text Search	Passed

T191	Verify that search works correctly with numbers (e.g., "Coke 0")	C132	Free Text Search	Passed
T192	Verify that search results loading time (latency) is reasonable (under 2-3 sec)	C133	Free Text Search	Passed
T193	Verify that search results can be filtered (e.g., by brand or category)	C134	Free Text Search	Failed
T194	Verify that searching without internet connection displays an error message	C135	Free Text Search	Passed
T195	Verify that the keyboard opens automatically when the search bar is tapped	C136	Free Text Search	Passed
T196	Verify that long search terms are supported without UI text clipping	C137	Free Text Search	Passed
T197	Verify that clicking a result redirects to the product's nutritional details	C138	Free Text Search	Passed
T198	Verify that search history is deleted if the user selects "Clear History"	C139	Free Text Search	Failed
T199	Verify that a random search for a non-food-related word returns no results	C140	Free Text Search	Passed
T200	Verify that searching for random strings or nonsensical characters returns no results	C141	Free Text Search	Passed
T201	Verify that clicking the barcode icon opens the device camera for scanning	C142	Barcode Scanner	Passed
T202	Verify that the system requests camera access permission on first use	C143	Barcode Scanner	Passed

T203	Verify that scanning an existing product displays nutritional info immediately	C144	Barcode Scanner	Passed
T204	Verify that scanning a non-existing barcode allows for "Manual Entry"	C145	Barcode Scanner	Passed
T205	Verify that the system can scan a barcode in low light conditions	C146	Barcode Scanner	Passed
T206	Verify that scanning a blurry or wrinkled barcode shows an error or retry prompt	C147	Barcode Scanner	Passed
T207	Verify that the flashlight (Flash) can be toggled within the scanner UI	C148	Barcode Scanner	Passed
T208	Verify that scanning works correctly in both Landscape and Portrait modes	C149	Barcode Scanner	Passed
T209	Verify that clicking Back or "Cancel" closes the camera and returns to the diary	C150	Barcode Scanner	Passed
T210	Verify that the camera performs auto-focus on the barcode in real-time	C151	Barcode Scanner	Passed
T211	Verify that attempting to scan without internet shows a network error message	C152	Barcode Scanner	Passed
T212	Verify that the scan recognition speed is fast (under 2 seconds)	C153	Barcode Scanner	Passed
T213	Verify that after a successful scan, the user can edit servings before confirming	C154	Barcode Scanner	Passed
T214	Verify that an error appears if the user has disabled camera access in settings	C155	Barcode Scanner	Passed

T215	Verify that the scanner recognizes various barcode types (EAN, UPC, etc.)	C156	Barcode Scanner	Passed
T216	Verify that food added to the diary immediately appears in the "Recent" tab	C157	Recent & Frequent Items	Passed
T217	Verify that a food item can be added to the diary with one click from the "Recent" list	C158	Recent & Frequent Items	Passed
T218	Verify that a food item can be marked as a "Favorite" by clicking the star icon	C159	Recent & Frequent Items	Passed
T219	Verify that unstarring an item removes it from the Favorites list	C160	Recent & Frequent Items	Passed
T220	Verify that the "Recent" list is sorted chronologically (newest to oldest)	C161	Recent & Frequent Items	Passed
T221	Verify that a single item can be deleted from the "Recent" list (e.g., via Swipe)	C162	Recent & Frequent Items	Passed
T222	Verify that the Favorites list is preserved after Logout and Login	C163	Recent & Frequent Items	Passed
T223	Verify that the last selected serving size is saved when re-adding from "Recent"	C164	Recent & Frequent Items	Passed
T224	Verify that multiple items can be added at once (Multi-add) from the "Recent" list	C165	Recent & Frequent Items	Passed
T225	Verify that searching within the "Recent" list displays only relevant results	C166	Recent & Frequent Items	Passed
T226	Verify that the "Recent" list is limited to a reasonable size and doesn't cause lag	C167	Recent & Frequent Items	Passed

T227	Verify that a favorite item cannot be added if it was removed from the main database	C168	Recent & Frequent Items	Passed
T228	Verify that a new food can be created with name, brand, and basic nutrition info	C169	Custom Food Creation	Passed
T229	Verify that the "Food Name" field is mandatory and cannot be left empty	C170	Custom Food Creation	Passed
T230	Verify that the system blocks negative calorie values (e.g., -50 kcal)	C171	Custom Food Creation	Passed
T231	Verify that the system blocks saving if Macros don't align with total calories	C172	Custom Food Creation	Passed
T232	Verify that custom serving units can be added (e.g., "Unit", "Tbsp", "Box")	C173	Custom Food Creation	Passed
T233	Verify Ease of Use and Data Consistency in Manual Food Creation	C174	Custom Food Creation	Failed
T234	Verify that a custom food can be edited after it has been created and saved	C175	Custom Food Creation	Passed
T235	Verify that deleting a custom food removes it from the user's personal list	C176	Custom Food Creation	Passed
T236	Verify that entering text in numeric fields (e.g., protein grams) is blocked	C177	Custom Food Creation	Passed
T237	Verify that optional vitamins and minerals can be added to the new food	C178	Custom Food Creation	Passed
T238	Verify that created food appears under the "My Foods" tab	C179	Custom Food Creation	Passed

T239	Verify that a product image can be uploaded during the creation process	C180	Custom Food Creation	Passed
T240	Verify that decimal values are supported in grams (e.g., 0.5g fat)	C181	Custom Food Creation	Passed
T241	Verify that clicking "Cancel" mid-creation clears fields and doesn't save	C182	Custom Food Creation	Passed
T242	Verify that a glass of water (250ml) can be added with one click	C183	Custom Food Creation	Passed
T243	Verify that the daily water counter updates immediately after adding	C184	Custom Food Creation	Passed
T244	Verify that a glass of water added by mistake can be removed	C185	Custom Food Creation	Passed
T245	Verify that units of measurement can be changed (ml to oz)	C186	Custom Food Creation	Passed
T246	Verify that a custom daily water goal can be set	C187	Custom Food Creation	Passed
T247	Verify that water progress is displayed visually (chart or filling glass)	C188	Custom Food Creation	Passed
T248	Verify that the water counter resets at midnight	C189	Custom Food Creation	Passed
T249	Verify that changing serving size (e.g., 1 to 2) doubles the total calories	C190	Serving Size & Calorie Calculation	Passed
T250	Verify that changing measurement units (grams to oz) updates calories proportionally	C191	Serving Size & Calorie Calculation	Passed

T251	Verify that entering decimal serving sizes (e.g., 1.5) is calculated correctly	C192	Serving Size & Calorie Calculation	Passed
T252	Verify that the system rounds calories to the nearest whole number (per business rules)	C193	Serving Size & Calorie Calculation	Passed
T253	Verify that updating serving size updates all Macros (Protein, Carbs, Fat)	C194	Serving Size & Calorie Calculation	Passed
T254	Verify that entering a serving size of 0 is blocked or shows an error	C195	Serving Size & Calorie Calculation	Passed
T255	Verify that entering a negative serving size (e.g., -1) is blocked	C196	Serving Size & Calorie Calculation	Passed
T256	Verify that calorie calculations remain accurate after app restart	C197	Serving Size & Calorie Calculation	Passed
T257	Verify that total meal calories (e.g., "Breakfast") update immediately after edit	C198	Serving Size & Calorie Calculation	Passed
T258	Verify that entering an extremely high serving size doesn't break the UI	C199	Serving Size & Calorie Calculation	Passed
T259	Verify that non-numeric input in the quantity field is blocked or auto-cleared	C200	Serving Size & Calorie Calculation	Passed
T260	Verify that clicking "Save" updates the remaining daily calories on the Dashboard	C201	Serving Size & Calorie Calculation	Passed
T261	Verify that an item can be moved from Breakfast to Lunch via the edit menu	C202	Serving Size & Calorie Calculation	Passed
T262	Verify that changing meal type updates the new meal's calorie summary	C203	Serving Size & Calorie Calculation	Passed
T263	Verify that an "Undo" confirmation appears for a few seconds after deletion	C204	Serving Size & Calorie Calculation	Passed

T264	Verify that an entire meal can be copied from yesterday to today	C205	Serving Size & Calorie Calculation	Passed
T265	Verify that a single item can be copied to a future date in the calendar	C206	Serving Size & Calorie Calculation	Passed
T266	Verify that copying a meal preserves the original serving sizes	C207	Serving Size & Calorie Calculation	Passed
T267	Verify that after changing the meal type, the item appears under the new category in the diary	C208	Meal Type Assignment	Passed
T268	Verify that changing the meal type does not alter the item's nutritional values (Macros)	C209	Meal Type Assignment	Passed
T269	Verify that an item can be moved to the "Snacks" category from any other meal	C210	Meal Type Assignment	Passed
T270	Verify that the item's order within the new meal is maintained (chronological or entry order)	C211	Meal Type Assignment	Passed
T271	Verify that the meal type can be changed for items added via the barcode scanner	C212	Meal Type Assignment	Passed
T272	Verify that meal type changes made in Offline mode are saved and synced when back online	C213	Meal Type Assignment	Passed
T273	Verify that an entire meal (e.g., Breakfast) can be copied from today to a future date	C214	Copying Meals between dates	Passed
T274	Verify that a meal can be copied from yesterday to today using "Quick Tools"	C215	Copying Meals between dates	Passed

T275	Verify that copying a meal transfers all food items without any omissions	C216	Copying Meals between dates	Passed
T276	Verify that copying a meal preserves the exact serving sizes as the original	C217	Copying Meals between dates	Passed
T277	Verify that the daily calorie total on the target date updates immediately after copying	C218	Copying Meals between dates	Passed
T278	Verify that copying a meal to a date with existing data appends the items rather than overwriting	C219	Copying Meals between dates	Passed
T279	Verify that one meal type (e.g., Lunch) can be copied to a different type (e.g., Dinner)	C220	Copying Meals between dates	Passed
T280	Verify that the system displays a visual confirmation (Success Toast) after copying	C221	Copying Meals between dates	Passed
T281	Verify that copying a meal containing "Custom Food" works correctly	C222	Copying Meals between dates	Passed
T282	Verify that clicking "Cancel" during target date selection stops the action	C223	Copying Meals between dates	Passed
T283	Verify single item deletion from the Food Diary	C224	Deleting Items	Passed
T284	Verify that the "Edit" button allows selecting and deleting multiple items (Bulk Delete)	C225	Deleting Items	Passed
T285	Verify that after deleting an item, the remaining daily calories on the Dashboard update immediately	C226	Deleting Items	Passed

T286	Verify that the system displays an "Undo" button for a few seconds after deletion	C227	Deleting Items	Failed
T287	Verify that deleting an entire meal (e.g., Breakfast) removes all its associated food items at once	C228	Deleting Items	Passed
T288	Verify that after deleting an item, remaining daily calories update (increase)	C229	Deleting Items	Passed
T289	Verify that the weight goal can be updated to a valid value (e.g., from 80kg to 75kg)	C230	Weight Goal & Weekly Pace	Passed
T290	Verify that changing the weight goal automatically updates the daily calorie budget on the Dashboard	C231	Weight Goal & Weekly Pace	Passed
T291	Verify that a weekly pace can be selected from the list (e.g., 0.25, 0.5, 0.75, or 1 kg per week)	C232	Weight Goal & Weekly Pace	Passed
T292	Verify that selecting a faster weekly pace decreases the allowed daily calorie intake	C233	Weight Goal & Weekly Pace	Passed
T293	Verify that the system blocks extreme weight goals (e.g., below 30kg or above 300kg)	C234	Weight Goal & Weekly Pace	Passed
T294	Verify that the system displays a warning if the selected pace is considered unhealthy/extreme	C235	Weight Goal & Weekly Pace	Passed
T295	Verify that the estimated goal completion date updates based on the selected pace	C236	Weight Goal & Weekly Pace	Passed
T296	Verify that a confirmation message ("Goals updated successfully") appears after a successful save	C237	Weight Goal & Weekly Pace	Passed

T297	Verify that entering non-numeric characters in the weight goal field is blocked	C238	Weight Goal & Weekly Pace	Passed
T298	Verify the weight field does not accept negative numbers	C239	Weight Goal & Weekly Pace	Passed
T299	Verify that the system correctly saves both the uploaded photo and the weight value	C240	Weight Goal & Weekly Pace	Passed
T300	Verify that different activity levels can be selected (e.g., Sedentary, Lightly Active, Very Active)	C241	Activity Level Updates	Passed
T301	Verify that switching from low to high activity level automatically increases the daily calorie budget	C242	Activity Level Updates	Passed
T302	Verify that switching from high to low activity level automatically decreases the daily calorie budget	C243	Activity Level Updates	Passed
T303	Verify that the system provides a description/tool-tip for each activity level	C244	Activity Level Updates	Passed
T304	Verify that selecting a level and clicking "Cancel" does not change the diary calculations	C245	Activity Level Updates	Passed
T305	Verify that updating the activity level affects the "Target Line" in the Progress charts	C246	Activity Level Updates	Passed
T306	Verify that after saving, the new activity level is correctly displayed in the user profile summary	C247	Activity Level Updates	Passed
T307	Verify that the system recalculates Macros distribution based on the new activity level	C248	Activity Level Updates	Passed

T308	Verify that changing activity level mid-day does not delete or alter food entries already	C249	Activity Level Updates	Passed
T309	Verify that the system allows changing the activity level an unlimited number of times	C250	Activity Level Updates	Passed
T310	Verify that manual activity updates do not cause calorie doubling if synced with a smartwatch	C251	Activity Level Updates	Passed
T311	Verify that clicking Back without saving triggers an "Unsaved Changes" alert	C252	Activity Level Updates	Passed
T312	Verify synchronization with a smartwatch to reflect daily burned calories in the app	C253	Activity Level Updates	Passed
T313	Verify that the pie chart displays the relative breakdown of P/C/F in percentages	C254	Macros Breakdown (P/C/F)	Passed
T314	Verify that the total grams of each macro match the sum of all logged items in the diary	C255	Macros Breakdown (P/C/F)	Passed
T315	Verify that tapping a chart segment (e.g., Carbs) shows the exact grams consumed	C256	Macros Breakdown (P/C/F)	Passed
T316	Verify that chart colors match the legend and remain consistent throughout the app	C257	Macros Breakdown (P/C/F)	Passed
T317	Verify that the macros chart updates in real-time immediately after adding or	C258	Macros Breakdown (P/C/F)	Passed
T318	Verify that the system displays the remaining grams for each macro relative to the daily goal	C259	Macros Breakdown (P/C/F)	Passed

T319	Verify that the chart shows "0" or an empty state at the start of a new day before any logging	C260	Macros Breakdown (P/C/F)	Passed
T320	Verify that navigating between days updates the chart to that specific day's data	C261	Macros Breakdown (P/C/F)	Passed
T321	Verify that if a food item has 0g fat, the chart displays correctly without errors	C262	Macros Breakdown (P/C/F)	Passed
T322	Verify that the total percentages in the pie chart always sum up to 100% (rounding check)	C263	Macros Breakdown (P/C/F)	Passed
T323	Verify that viewing the chart in Landscape mode doesn't distort the chart or text	C264	Macros Breakdown (P/C/F)	Failed
T324	Verify that a non-premium user can customize their nutritional goals	C265	Macros Breakdown (P/C/F)	Passed
T325	Verify that the system supports displaying nutritional breakdowns on both a daily and weekly basis	C266	Macros Breakdown (P/C/F)	Passed
T326	Verify that a Premium user can set P/C/F goals by grams	C267	(Premium) Custom Macro Goals	Passed
T327	Verify that a Premium user can set P/C/F goals by percentages	C268	(Premium) Custom Macro Goals	Passed
T328	Verify that in percentage mode, the system blocks saving if the total is not 100%	C269	(Premium) Custom Macro Goals	Passed
T329	Verify that setting an extremely high protein goal displays a warning or nutritional tip	C270	(Premium) Custom Macro Goals	Passed

T330	Verify that clicking "Reset to Default" restores values to the original weight/height calculation	C271	(Premium) Custom Macro Goals	Passed
T331	Verify that current weight can be entered and saved successfully	C272	Check-in Weight Entry	Passed
T332	Verify that entering a new weight updates the Dashboard status	C273	Check-in Weight Entry	Passed
T333	Verify that a note or photo can be added to each weight entry	C274	Check-in Weight Entry	Passed
T334	Verify that weight can be entered retroactively for a past date	C275	Check-in Weight Entry	Passed
T335	Verify that unrealistic weight entries (e.g., 0kg or 600kg) are blocked	C276	Check-in Weight Entry	Passed
T336	Verify that a previous weight entry can be edited or deleted from history	C277	Check-in Weight Entry	Passed
T337	Verify how duplicate weight entries on the same day are handled (Update vs New)	C278	Check-in Weight Entry	Passed
T338	Verify that the chart can be filtered by different time ranges (Week, Month, 3M, Year)	C279	Historical Progress Charts	Passed
T339	Verify that the "Goal Line" is visible on the chart alongside the actual progress line	C280	Historical Progress Charts	Passed
T340	Verify how data gaps (days without weigh-ins) are handled visually on the chart	C281	Historical Progress Charts	Passed

T341	Verify that chart or weight data can be exported as PDF/CSV (if supported)	C282	Historical Progress Charts	Passed
T342	Verify that a cardio exercise (e.g., "Running") can be searched from the database	C283	Cardio Cardiovascular Exercises	Passed
T343	Verify that entering cardio duration automatically calculates calories burned	C284	Cardio Cardiovascular Exercises	Passed
T344	Verify that calories burned calculation accounts for the user's current weight	C285	Cardio Cardiovascular Exercises	Passed
T345	Verify that a custom cardio exercise can be added with a name and calorie count	C286	Cardio Cardiovascular Exercises	Passed
T346	Verify that burned calories are added to the daily budget (Calories Remaining)	C287	Cardio Cardiovascular Exercises	Passed
T347	Verify that exercise intensity levels affect the calories burned calculation	C288	Cardio Cardiovascular Exercises	Passed
T348	Verify that an exercise can be added retroactively to a past date	C289	Cardio Cardiovascular Exercises	Passed
T349	Verify that deleting an exercise updates the daily calorie balance immediately	C290	Cardio Cardiovascular Exercises	Passed
T350	Verify that unrealistic durations (e.g., 1440 mins or negative numbers) are	C291	Cardio Cardiovascular Exercises	Passed
T351	Verify that exercises synced from 3rd party apps (Apple Health/Google Fit) appear	C292	Cardio Cardiovascular Exercises	Passed
T352	Verify that the daily exercise summary shows total minutes and total calories burned	C293	Cardio Cardiovascular Exercises	Passed

T353	Verify that a specific strength exercise (e.g., "Squat") can be searched	C294	Strengt Strength Training Sets/Reps	Passed
T354	Verify that multiple sets can be added for each exercise	C295	Strengt Strength Training Sets/Reps	Passed
T355	Verify that repetitions and weight can be entered for each set individually	C296	Strengt Strength Training Sets/Reps	Passed
T356	Verify that a set can be marked as "Completed" during the workout	C297	Strengt Strength Training Sets/Reps	Passed
T357	Verify that a custom exercise can be added if not found in the database	C298	Strengt Strength Training Sets/Reps	Passed
T358	Verify that the system displays the "Last Lift" values as a suggestion	C299	Strengt Strength Training Sets/Reps	Passed
T359	Verify that weight units (kg/lbs) can be toggled within the workout screen	C300	Strengt Strength Training Sets/Reps	Passed
T360	Verify that deleting a set or an entire exercise updates the workout summary	C301	Strengt Strength Training Sets/Reps	Passed
T361	Verify that invalid values (e.g., 0 reps or 1000 kg) are blocked	C302	Strengt Strength Training Sets/Reps	Passed
T362	Verify that an entire strength workout can be copied from a previous date	C303	Strengt Strength Training Sets/Reps	Passed
T363	Verify that calorie calculation changes based on the user's updated body weight	C304	Calories Burned Calculation	Passed

T364	Verify that doubling the duration (e.g., 15 to 30 min) doubles the calories burned	C305	Calories Burned Calculation	Passed
T365	Verify that strength training calculates calories by duration or work volume	C306	Calories Burned Calculation	Passed
T366	Verify that total burned calories are automatically subtracted from the daily balance	C307	Calories Burned Calculation	Passed
T367	Verify that the system does not calculate "negative" calories burned	C308	Calories Burned Calculation	Passed
T368	Verify that multiple workouts show a cumulative total of calories burned for the day	C309	Calories Burned Calculation	Passed
T369	Verify that manual entries do not overwrite data synced from a smartwatch	C310	Calories Burned Calculation	Passed
T370	Verify that changing gender in the profile updates the calculation formula (BMR/MET)	C311	Calories Burned Calculation	Passed
T371	Verify that calories burned data is correctly displayed in weekly/monthly charts	C312	Calories Burned Calculation	Passed
T372	Verify that the system permission request appears immediately upon the first integration attempt	C313	Third-party App Integration	Passed
T373	Verify that the user can toggle specific data types for sync (e.g., steps only, not weight)	C314	Third-party App Integration	Passed
T374	Verify that after granting permissions, data from Health/Fit populates the app within seconds	C315	Third-party App Integration	Passed

T375	Verify that revoking permissions from device settings stops data synchronization in the app	C316	Third-party App Integration	Passed
T376	Verify that a weight update in Apple Health automatically updates the current weight in the app	C317	Third-party App Integration	Passed
T377	Verify that clicking "Disconnect" removes the link and handles existing data per specifications	C318	Third-party App Integration	Passed
T378	Verify that OAuth login to Garmin Connect is successful and redirects back to the app	C319	Third-party App Integration	Passed
T379	Verify that a "Running" activity saved on Garmin appears in the food diary with matching calories	C320	Third-party App Integration	Passed
T380	Verify that steps measured by the watch update the app's step counter in real-time	C321	Third-party App Integration	Passed
T381	Verify that missing data from a disconnected period syncs correctly once the watch re-connects	C322	Third-party App Integration	Passed
T382	Verify that step count on the Dashboard updates automatically every time the app is opened	C323	Auto Step-count Sync	Passed
T383	Verify that step-to-calorie conversion follows the ratio defined in the specifications	C324	Auto Step-count Sync	Passed
T384	Verify that the step counter resets to 0 at midnight (00:00) and starts a new count	C325	Auto Step-count Sync	Passed
T385	Verify that if using both phone and watch, the app prioritizes one source to avoid double counting	C326	Auto Step-count Sync	Passed

T386	Verify that manually changing the step goal updates the progress percentage immediately	C327	Auto Step-count Sync	Passed
T387	Verify that restarting the device does not cause loss of today's step data	C328	Auto Step-count Sync	Passed
T388	Verify that changing device theme settings updates the app automatically without restart	C329	Dark & Light Mode	Passed
T389	Verify that all text colors invert correctly and remain fully legible in both modes	C330	Dark & Light Mode	Passed
T390	Verify that emojis and icons are clearly visible and don't blend into the background	C331	Dark & Light Mode	Passed
T391	Verify that charts maintain legend colors while the chart background adapts to the theme	C332	Dark & Light Mode	Passed
T392	Verify that input fields maintain visible borders and focus states in Dark Mode	C333	Dark & Light Mode	Passed
T393	Verify that theme switching during an active process (e.g., barcode scanning) doesn't interrupt it	C334	Dark & Light Mode	Passed
T394	Verify that all UI elements remain within screen boundaries on small devices	C335	Responsive Layout	Passed
T395	Verify that no unnecessary horizontal scrolling occurs on the home or diary screens	C336	Responsive Layout	Passed

T396	Verify that on tablets/iPads, the layout expands proportionally and doesn't look stretched	C337	Responsive Layout	Passed
T397	Verify that long text strings wrap correctly or use ellipsis (...) without overlapping other elements	C338	Responsive Layout	Passed
T398	Verify that charts resize correctly based on screen size without losing legend data	C339	Responsive Layout	Passed
T399	Verify that rotating to Landscape mode adjusts the layout correctly (if supported)	C340	Responsive Layout	Passed
T400	Verify that system-level display scaling doesn't break the app's table structures	C341	Responsive Layout	Passed
T401	Verify that changing device language to Hebrew mirrors the entire UI (RTL)	C342	Localization & RTL Support	Passed
T402	Verify that punctuation marks appear correctly at the end of Hebrew sentences	C343	Localization & RTL Support	Passed
T403	Verify that numbers (calories, weight) remain LTR even when the UI is in Hebrew	C344	Localization & RTL Support	Passed
T404	Verify that Hebrew text is not truncated in buttons or menus due to string length	C345	Localization & RTL Support	Passed
T405	Verify that directional icons (e.g., back arrow) are mirrored in RTL mode	C346	Localization & RTL Support	Passed
T406	Verify that text alignment in input fields starts from the right in Hebrew and left in English	C347	Localization & RTL Support	Passed
T407	Verify that food names in search results match the selected interface language	C348	Localization & RTL Support	Passed

T408	Verify that a visual indicator (banner/icon) appears when the device goes offline	C349	Offline Offline Mode Functionality	Passed
T409	Verify that previously cached data (e.g., today's food diary) is accessible offline	C350	Offline Offline Mode Functionality	Passed
T410	Verify that new entries (e.g., water or weight) can be added offline and are saved locally	C351	Offline Offline Mode Functionality	Passed
T411	Verify that offline actions automatically sync with the server once the connection is restored	C352	Offline Offline Mode Functionality	Passed
T412	Verify that searching for food offline shows a clear "No Connection" message (not an infinite loader)	C353	Offline Offline Mode Functionality	Passed
T413	Verify that basic navigation between screens works without crashes during offline mode	C354	Offline Offline Mode Functionality	Passed
T414	Verify that switching between Wi-Fi and Cellular data doesn't cause the app to close or crash	C355	Network Switching	Passed
T415	Verify that food search continues to function smoothly during a network switch	C356	Network Switching	Passed
T416	Verify that an upload (e.g., profile photo) resumes correctly after a network handover	C357	Network Switching	Passed
T417	Verify that third-party sync is not interrupted or duplicated due to device IP change	C358	Network Switching	Passed
T418	Verify that an appropriate error message is displayed if the handover fails and no data is available	C359	Network Switching	Passed

T419	Verify that a 500 Internal Server Error displays a user-friendly message instead of raw code/stack trace	C360	Error Handling	Passed
T420	Verify that a 404 Not Found error displays a dedicated screen with a "Back to Home" button	C361	Error Handling	Passed
T421	Verify that error messages include a "Retry" button to re-attempt the action	C362	Error Handling	Passed
T422	Verify that error messages are localized according to the app's language settings	C363	Error Handling	Passed
T423	Verify that validation errors (e.g., wrong password) appear clearly next to the relevant input field	C364	Error Handling	Passed

Bug Reports

[MFP-1] (T113) Password can be created without numbers Created: 29/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	High
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified S		

Severity: S3 - Major

Description

The system does not enforce the alphanumeric password policy. Users are able to set passwords containing only letters, despite the requirement for a combination of letters and numbers.

It fails to enforce the "Complexity Requirements" (alphanumeric). This makes user accounts more susceptible to "Brute Force" attacks because simple, letter-only passwords are much easier to crack.

Steps to Reproduce

1. Go to the App My Fitness Pal and press Sign Up For Free then continue. Complete all necessary sections: age, weight, goal, and daily activity level and etc. Then you enter to the sign up page in the app.
2. Enter Email yulrud1122@gmail.com and a password containing **only letters** (e.g., OnlyLetters).
3. Click **Next** and **Click the** i agree to MyFitnessPal's Terms&Conditions.

Expected Result

The system should **block** the action and show an error: "Password must include both letters and numbers."

Actual Result

The password is **accepted** and the account is updated/created.

[MFP-2] (T118) Missing Permissions Scopes on Google Consent Screen Created:

29/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	High
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S3 - Major
-----------	------------

Description

During the Google authentication flow, the Consent Screen does not display the specific data scopes requested by the application. Users are unable to see exactly what information (Email/Profile) they are authorizing the app to access.

Steps to Reproduce

1. Navigate to the **Login** page of the application.
2. Click the "**Continue with Google**" button.
3. Choose Google account credentials.
4. Observe the **Google Consent Screen** before final authorization.

Expected Result

The Google Consent Screen must clearly display the specific data requested, such as:

- "View your email address"
- "See your personal info, including any personal info you've made publicly available"

Actual Result

The Consent Screen Do not appear, it redirects to enter personal details.

[MFP-3] (T127) "Name" Field Fails to Trim Leading and Trailing Spaces Created:

29/Mar/26 Updated: 02/Apr/26

Status: To Do**Project:** [MyFitnessPal](#)**Components:** None**Affects versions:** None**Fix versions:** None**Type:** Bug**Priority:** Low**Reporter:** [Yulia rudenko](#)**Assignee:** [Yulia rudenko](#)**Resolution:** Unresolved**Votes:** 0**Labels:** None**Remaining Estimate:** Not Specified**Time Spent:** Not Specified**Original estimate:** Not Specified**Severity:** S4 - Minor**Description**

When a user enters a name with extra spaces (e.g., " John Doe "), the system saves the input exactly as typed. This causes alignment issues in the UI and can lead to failed search results or duplicate records in the database.

Steps to Reproduce

1. Open the "Registration" page.
2. Click on the "Name" input field.
3. Type a name with spaces before and after the text (Example: [space][space]Yulia[space][space]).
4. Click the "Next" button.
5. Inspect the saved name in the profile header or the database.

Expected Result

The system should sanitize the input by removing all leading and trailing spaces before saving.

- **Input:** " Yulia "
- **Saved Value:** "Yulia"

Actual Result

The system saves the name with the extra spaces included.

- **Input:** " Yulia "
- **Saved Value:** " Yulia "

[MFP-4] (T128) [The Name field accepts numeric-only input, allowing successful registration](#) Created: 29/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Medium
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S4 - Minor
-----------	------------

Description

The "Name" field lacks proper validation to ensure that only alphabetic characters (and allowed symbols like hyphens or apostrophes) are entered. Currently, the system accepts strings consisting entirely of numbers, which leads to "dirty" data and invalid user profiles.

Steps to Reproduce

1. Navigate to the [Sign up](#) page then press continue.
2. Locate the "Name" input field.
3. Enter a numeric value (Example: 1234).
4. Fill in the remaining required fields with valid data.
5. Click the "Next" button.

Expected Result

The system should trigger a validation error message (e.g., "Name can only contain letters") and prevent the form from being submitted until a valid name is provided.

Actual Result

The registration is successful, and the numeric value is saved as the user's name in the database and displayed in the UI.

If MyFitnessPal wants to send a personalized email ("Hi 1234, welcome back!"), it looks extremely unprofessional. Moreover, when the company runs analytics on their user base, having numeric names creates "noise" and inaccurate reporting.

57 15:47

Goals

Hey, 1234. 🙌 Let's start with your goals.

Select up to three that are most important to you.

- Lose weight ☐
- Maintain weight ☐
- Gain weight ☐
- Gain muscle ☐
- Modify my diet ☐
- Plan meals ☐
- Manage stress ☐

Numeric-only input in the name field is accepted

[MFP-5] (T134) "Weight" Field Does Not Support Decimal Input During Registration

Created: 29/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Medium
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S3 - Major
-----------	------------

Description

During the registration process, the "Weight" input field is restricted to whole numbers. When a user attempts to enter a decimal point (dot or comma), the system either blocks the keystroke or triggers a validation error. This prevents users from providing accurate health data.

Steps to Reproduce

1. Open the Registration page.
2. Fill in all required fields until you reach the "Weight" field.
3. Attempt to type a decimal value (Example: 70.5).
4. Try to submit the form.

Expected Result

The field should accept floating-point numbers (decimals) to allow for precise weight tracking.

- **Target Value:** 60.5

Actual Result

The system restricts input to whole numbers only.

73 20:18

You

Just a few more questions

How tall are you?

162

How much do you weigh?

60 kg

It's OK to estimate, you can update later.

What's your goal weight?

59 kg

Don't worry. This doesn't affect your daily calorie goal and you can always change it later.

The app does not allow to continue to the registration

[MFP-6] (T135) **System Accepts Unrealistic Weight Values During Registration** Created: 29/Mar/26 Updated: 02/Apr/26

Status: To Do

Project: [MyFitnessPal](#)

Components: None

Affects versions: None

Fix versions: None

Type: Bug

Priority: Medium

Reporter: [Yulia rudenko](#)

Assignee: [Yulia rudenko](#)

Resolution: Unresolved

Votes: 0

Labels: None

Remaining Estimate: Not Specified

Time Spent: Not Specified

Original estimate: Not Specified

Severity: S3 - Major

Description

The system does not have a minimum or maximum threshold for the weight input field, [This](#) allows for the entry of values that are physically impossible or unrealistic for the target audience (adult users), leading to corrupted health data and inaccurate system calculations.

Steps to Reproduce

1. Open the app and Navigate to the **Manual Registration**.
2. Locate the **"Weight"** input field.
3. Enter an unrealistic numeric value (Example: 20).
4. Complete the rest of the form with valid data.
5. Click **"Next"**.

Expected Result

The system should implement a "Logical Range" validation.
the system should display a validation error: *"Please enter a valid weight between 30kg and 300kg."*

Actual Result

The system accepts [the value](#) 20 without any warning or error, saving it to the database and displaying it in the user profile.

70 20:37

You

Just a few more questions

How tall are you?

162

How much do you weigh?

20 kg

It's OK to estimate, you can update later.

The app accepts physically impossible or unrealistic weight

[MFP-7] (T137)System Allows Saving Extreme Weight Gap Despite Warning Alert Created: 29/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Low
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S3 - Major
-----------	------------

Description

The application allows users to set weight goals that are mathematically or physically extreme (e.g., a current weight of 100 kg and a target weight of 40 kg) without displaying any cautionary message or confirmation alert. This can lead to unhealthy goal setting and inaccurate calorie projections. The application fails to enforce a "Healthy Range" for weight-loss goals. Allowing a user to set a target weight that results in an underweight BMI without a hard block is a significant product failure.

Steps to Reproduce

1. Navigate to the **My Goals** page.
2. Enter a valid **Current Weight** (Example: 60 kg).
3. Enter an extreme **Target Weight** in the target field (Example: 20 kg).
4. Click **"Save"** or **"Update Goals"**.
5. Observe the system's response.

Expected Result

The system should either:

1. **Block the action:** Prevent saving until a more realistic goal is entered.
2. **Require Double Confirmation:** Force the user to check a box or click "Confirm Intent" before saving such an extreme gap.

Actual Result

The alert appears as a simple notification, but the "Save" action completes successfully in the background, updating the profile with the unrealistic goal.

[MFP-8] [\(T145\) "Eye" Icon Fails to Toggle Password Visibility](#) Created:

29/Mar/26 Updated: 02/Apr/26

Status: To Do

Project: [MyFitnessPal](#)

Components: None

Affects versions: None

Fix versions: None

Type: Bug

Priority: Medium

Reporter: [Yulia rudenko](#)

Assignee: [Yulia rudenko](#)

Resolution: Unresolved

Votes: 0

Labels: None

Remaining Estimate: Not Specified

Time Spent: Not Specified

Original estimate: Not Specified

Severity: S3 - Major

Description

The password visibility toggle is non-functional. When a user clicks the "Eye" icon, the password remains hidden (or remains visible), and the icon itself may not change its state (e.g., from an open eye to a slashed eye).

Steps to Reproduce

1. Navigate to the **Login** or **Registration** page.
2. Enter a string of characters into the "**Password**" field (e.g., P@ssword123).
3. Observe that the password is masked by default (dots/asterisks).
4. Search for the eye icon.
5. See that the eye icon does not exist.

Expected Result

- **First Click:** The password should become visible as plain text, and the icon should change to the "Eye-slash" (hidden) state.
- **Second Click:** The password should be masked again, and the icon should return to the "Open Eye" state.

Actual Result

The eye icon does not exist.

[MFP-9] (T616)Missing "Show Password" (Eye Icon) on Mobile Application But Exists In The Web Version Created: 29/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	High
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S2 - Critical
-----------	---------------

Description

There is a visual and functional discrepancy between the Web and Mobile platforms. While the Web version allows users to toggle password visibility using an "Eye" icon, this element is completely missing from the Mobile application's login and registration forms.

Steps to Reproduce

1. Open the **Mobile Application**.
2. Navigate to the **Login** screen.
3. Tap on the **"Password"** input field.
4. Observe the right side of the input field where the "Eye" icon should be located.
5. Compare this with the **Web** version of the same page.

Expected Result

The Mobile App should maintain UI consistency with the Web platform. An "Eye" icon should be visible in the password field to allow users to toggle visibility.

Actual Result

The "Eye" icon is missing on the Mobile App. Users have no way to verify their password input, leading to potential login errors.

[MFP-10] (T158)System Allows Password Recovery Requests for Invalid Email Formats

Created: 31/Mar/26 Updated: 02/Apr/26

Status:	To Do		
Project:	MyFitnessPal		
Components:	None		
Affects versions:	None		
Fix versions:	None		
Type:	Bug	Priority:	Low
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		
Severity:	S3 - Major		

Description

The "Forgot Password" / "Recovery" page does not perform proper syntax validation on the email input field. Users can submit the form using invalid email structures, which can lead to unnecessary server requests or unhandled errors in the backend.

Steps to Reproduce

1. Navigate to the **Login** page.
2. Click on "**Forgot Password?**".
3. In the email input field, enter an invalid format ([testuser@no-domain](#))
4. Click the "**Submit**" button.
5. Observe the system's reaction.

Expected Result

The system should perform real-time validation and block the submission.

- An error message should appear: *"Please enter a valid email address."*
- The "Send" button should ideally remain disabled, or the form submission should be intercepted with a validation alert.

Actual Result

The system accepts the invalid string and attempts to process the recovery request (e.g., shows a "Success" message or a generic "Email sent" confirmation), even though the email format is technically impossible.

[MFP-11] [\(T164\)Missing "Confirm Password" field on Password Reset screen](#) Created: 31/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Medium
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S3 - Major
-----------	------------

Description

The Password Reset form contains only a single "New Password" input field. Standard security and UX practices require a "Confirm Password" field to prevent users from accidentally locking themselves out due to typos in a masked field.

Steps to Reproduce:

1. Go to the app and click on the Log and then Forgot password
2. Enter an existing [Email](#) and click submit
3. Go to the email and Click on a valid Password Reset link from a recovery email.
4. Navigate to the **Reset Password** page.
5. Observe the input fields available.

Expected Result: The page should include two mandatory fields:

1. **"New Password"**
2. **"Confirm Password"** The system should validate that both fields match before allowing the user to submit.

Actual Result:

Only one password field is displayed. There is no mechanism to verify that the user typed their intended password correctly.

[MFP-12] [\(T617\)System Processes Password Recovery for Unregistered Emails](#) Created: 31/Mar/26 Updated: 31/Mar/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Medium
Reporter:	Yulia.rudenko	Assignee:	Yulia.rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S3 - Major
-----------	------------

Description

The "Forgot Password" feature does not verify if the entered email address exists in the system's database before proceeding. Currently, the system accepts any string that follows an email format, which can lead to a confusing user experience where users wait for recovery emails that will never arrive.

Steps to Reproduce

1. Open the mobile application and go to the **Login** screen.
2. Tap on "**Forgot Password?**".
3. Enter a random, non-existent email address (e.g., not_a_user_12345@testmail.com).
4. Tap the "**Submit**".
5. Observe the system's response.

Expected Result

The system should validate the email against the database:

- **Option 1 (Direct):** Return an error message: *"The email address entered is not associated with an active account."*
- **Option 2 (Secure):** Show a message stating: *"If an account exists for this email, you will receive a reset link shortly."* (This prevents "fishing" for emails while informing the user).

Actual Result

The system accepts the non-existent email and displays a "Success" or "Email Sent" message, even though no account is associated with that address.

[MFP-13] (T186) Search Engine Fails to Provide Auto-complete Suggestions or Typo Corrections Created: 31/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Low
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S3 - Major
-----------	------------

Description

The search functionality within the food logging/entry module lacks an "Auto-complete" If a user makes a minor typo (e.g., typing "Aple" instead of "Apple"), the system returns "No Results Found" instead of suggesting the correct term or displaying similar items.

Steps to Reproduce

1. Go to the Dashboard, enter diary and press "**Add Food**".
2. Tap on the search input field.
3. Start typing a common food item with a minor typo (e.g., Apel, Bananna, Yogert).
4. Observe the search results area while typing and after clicking "Search".

Expected Result

- **Fuzzy Search / Typo Correction:** If a typo is detected, the system should either:
 1. Suggest: "*Did you mean: Apple?*"
 2. Automatically show results for the most likely match ("Apple").

Actual Result

If the word is not spelled 100% correctly, it returns an empty state ("No results found"), forcing the user to delete and re-type manually.

[MFP-14] (T193)Missing Search Filters: Users are unable to filter or narrow down search results by Brand, Category, or Nutrients. Created: 31/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Low
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S3 - Major
-----------	------------

Description

The search results page lacks a filtering mechanism. When a user searches for a common item (e.g., "Yogurt"), the system returns a long, flat list of all matching items. There is no option to filter these results by "Brand" (e.g., Danone, Muller) or by "Category" (e.g., Dairy, Vegan, Low Fat), making it difficult for the user to find the exact product they consumed.

Steps to Reproduce

1. Navigate to the "Add Food" / Search screen.
2. Enter a broad search term (Bread).
3. View the list of search results.
4. Look for a "Filter" icon, a sidebar, or a dropdown menu to narrow the results.

Expected Result

- The search results page should include a **Filter** option (button or icon).
- Users should be able to select specific criteria, such as:
 - **Brand Name**
 - **Food Category** (Dairy, Bakery, etc.)
 - **Nutritional Content** (e.g., High Protein, Low Carb).
- The list should update dynamically based on the selected filters.

Actual Result

There are no filtering options available. The user is forced to scroll through dozens (or hundreds) of results to find the correct item, which significantly increases the time spent on logging a meal.

[MFP-15] [\(T198\)Missing "Clear History" Option in Search Screen](#) Created: 31/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Low
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S4 - Minor
-----------	------------

Description

The search interface displays a list of "Recent Searches," but there is no mechanism provided for the user to clear this list or delete individual entries.

The interface forces persistent data on the user without providing a management mechanism, which leads to a cluttered and non-customizable UI.

Steps to Reproduce

1. Enter [the all](#) then Navigate to "Diary" enter "add food".
2. Perform several searches to populate the "**Recent Searches**" list.
3. Observe the "Recent Searches" section.
4. Look for a "Clear All" button, an "X" next to individual items, or a "Delete History" option in the settings.

Expected Result

- The user should have a visible and accessible way to clear their search history.
- **Option A:** A "Clear All" link/button at the top or bottom of the recent searches list.
- **Option B:** An "X" icon next to each search term to allow individual deletion.

Actual Result

There is no option or button to delete or clear the search history. Once a search is performed, it remains in the "Recent Searches" list with no way to remove it.

[MFP-16] (T233) Manual Text Entry for Serving Units Affects Ease of Use and Data**Consistency** Created: 31/Mar/26 Updated: 31/Mar/26**Status:** To Do**Project:** [MyFitnessPal](#)**Components:** None**Affects versions:** None**Fix versions:** None**Type:** Bug**Priority:** Low**Reporter:** [Yulia rudenko](#)**Assignee:** [Yulia rudenko](#)**Resolution:** Unresolved**Votes:** 0**Labels:** None**Remaining Estimate:** Not Specified**Time Spent:** Not Specified**Original estimate:** Not Specified**Severity:** S4 - Minor**Description**

In the **"Create Food"** screen, the **"Serving Size" unit field** (where "cups" is currently entered) is a free-text input field. This design choice negatively impacts **the Ease of Use** (Usability) by forcing users to manually type common units.

Steps to Reproduce

1. Open the app and click on the "Diary".
2. Choose Breakfast and Click on "Add food".
3. Go to "My foods" and click on "Create a food"
4. Fill in the mandatory fields under **"New Food"** (Brand, Description).
5. Scroll down to the **"Servings"** section.
6. Tap on the unit(s) field and see that you cant save the food if you don't write amout of servings such as "3 cups"

Actual Result

The system requires the user to manually type the unit of measurement. There is no dropdown menu, picker, or autocomplete suggestions available.

Expected Result

To ensure **Ease of Use** and data integrity, the unit field should be a **Dropdown/Selection Menu** containing standard units (e.g., Grams, Milliliters, Cups, Units, oz). This minimizes manual typing and prevents typos.

- Clicking **"Undo"** should instantly restore the deleted record to its original position.

Actual Result

The item is deleted instantly.
No **"Undo"** option is displayed.

[MFP-19] (T323)App Interface Does Not Rotate to Landscape Mode Created:

31/Mar/26 Updated: 02/Apr/26

Status:	To Do
Project:	MyFitnessPal
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Low
Reporter:	Yulia rudenko	Assignee:	Yulia rudenko
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S4 - Minor
-----------	------------

Description

When a user rotates their device to **Landscape** mode (with "Auto-rotate" enabled on the device), the app interface does not respond or re-orient itself.

This defect highlights a lack of **Device Orientation Support**.

Steps to Reproduce

1. Open the application and navigate to the **Dashboard** screen.
2. Ensure the mobile device has "**Auto-rotate**" enabled in the system settings.
3. Physically rotate the device to a horizontal (**Landscape**) position.
4. Observe the application's behavior.

Expected Result

- The application should detect the orientation change.
- The UI should rotate and re-render to fit the horizontal screen.
- Charts should expand to fill the width of the screen without distorting text or data points.

Actual Result

The application remains fixed in **Portrait** mode. The user is forced to view the charts in a narrow vertical layout, regardless of the device's physical orientation.
