1.1 Document Purpose

Thepurpose of this Software TestReport (STR) is to provide a comprehensive and detailed summary of the testing activities performed on the SHEIN E-commerce platform. This document outlines the testing objectives, the comprehensive scope of the evaluation, the methodologies employed during the STLC (Software Testing Life Cycle), and the final quality assessment.

This report serves as a formal record and a decision-making tool for stakeholders, including Project Managers and Developers, to determine the system's readiness for deployment. It identifies remaining risks, defect density, and provides a "Go/No-Go" recommendation based on the current quality of the build.

1.2 Project Background:

SHEIN E-commerce Platform

SHEIN is a global, industry-leading fashion and lifestyle e-retailer. The platform operates as a massive B2C (Business-to-Consumer) ecosystem, processing millions of transactions daily across more than 150 countries.

The application is a high-availability web portal that must handle extreme traffic spikes (e.g., Black Friday, 11.11) while maintaining a seamless user interface. The system integrates multiple complex subsystems:

- User Management & Security: Handles secure registration, multi-factor authentication, and personalized user profiles (Wishlists, Points, Coupons).
- Inventory & Dynamic Catalog: A real-time database managing hundreds of thousands of SKUs (Stock Keeping Units) with dynamic pricing and stock updates.
- Search and Discovery (AI-Driven): Advanced filtering based on attributes (size, color, material), image search capabilities, and personalized recommendation engines.
- Transaction & Checkout Engine: A high-precision module managing shopping bags, tax calculations, dynamic shipping costs, and multi-currency payment gateways (PayPal, Credit Cards, Klarna).
- Logistics & Order Tracking: Real-time integration with global logistics providers to provide customers with end-to-end tracking visibility.

1.3 System Architecture & Environment Overview

The testing was conducted on a dedicated Staging Environment which mirrors the production architecture to ensure results are accurate and relevant.

Tested Modules:

1. Home Page: Banners, navigation menus, and localized promotions.

2. Product Detail Pages (PDP): Image galleries, size selectors, and customer reviews.

3. Cart & Checkout: Price calculations, discount applications, and address validation.

4. Personal Area: Order history, return requests, and profile settings.

1.4 Testing Methodology (The STLC Process)

Our team followed a structured Agile-Testing methodology. The process was divided into five distinct phases to ensure maximum coverage:

1. Requirement Analysis: We analyzed the SHEIN business flow to identify "Critical Paths" (e.g., the path from search to purchase).

2. Test Planning (Jira): Defining the test strategy, resources, and timelines. We prioritized test cases based on business impact.

3. Test Design (TestRail): Creating detailed Step-by-Step Test Descriptions (STDs). Each test case included Pre-conditions, Test Steps, and Expected Results.

4. Test Execution: Manual execution of test cases. Each run was documented in TestRail with "Pass/Fail" status and evidence.

5. Defect Management (Jira): Bugs were reported with detailed reproduction steps, logs, and screenshots. We used a Severity/Priority matrix to manage f ixes.

2. Detailed Testing Scope

2.1 Functional Testing Areas (In-Scope)

Thefollowing sectionsdetail the specific modules of theSHEIN web platform that were subjected to rigorous testing. Each module was evaluated for functional accuracy, UI consistency, and error resilience.

2.1.1 Site Access & Availability

Homepage Loading: We verified that the homepage loads all assets (banners, fonts, icons) correctly under standard network conditions.

Browser Compatibility: The site was tested across Chrome, Firefox, Safari, and Edge to ensure uniform rendering.

Responsive Layout: Validation that the UI adapts to various screen resolutions (Desktop, Tablet, and Mobile Web) without element overlapping.

Error Handling: Testing the system's reaction to broken links, ensuring custom 404 and 500 error pages are displayed instead of raw server code.

2.1.2 User Registration & Authentication

Registration Flows: We validated successful account creation using valid email formats. Negative testing included attemptswith invalid email structures and weak passwords (under 6 characters or no special symbols).

Login Integrity: Verification of access using valid credentials and ensuring the system denies access with appropriate error messages for incorrect passwords or non-existent usernames.

Logout Mechanism: Testing the session termination flow to ensure that the user is fully logged out and cannot return to private account pages via the browser's "Back" button.

2.1.3 Password Recovery & Security

Recovery Flow: Validating the generation and delivery of password reset emails to valid accounts.

Negative Handling: Ensuring that the system does not leak information when an invalid or non-registered email is entered in the recovery field.

Session Management: Testing restricted access for guests, ensuring that checkout and profile pages are blocked for non- authenticated users.

2.1.4 Navigation, Search, and Catalog Discovery

Navigation Architecture: Testing the main menu categories and sub-categories to ensure deep-link accuracy. We also verified that clicking the SHEIN logo consistently redirects the user to the homepage.

Search Engine: Testing keyword searches for existing products and "No results found" scenarios for non-existing items. Special characters (e.g., @, #, $) were tested to ensure the search bar does not crash.

Filters & Sorting Logic: Validating that results correctly update when filtered by Size, Color, or Price. Sorting mechanisms (Price: Low to High; Popularity) were checked for mathematical accuracy.

2.1.5 Product Detail Page (PDP) & Wishlist

Visual Assets: Verification of the product image gallery, ensuring zoom features and carousel navigation function smoothly.

Data Accuracy: Testing the display of prices, discounts, and detailed product descriptions.

Dynamic Selection: Validating that users can select specific sizes and colors before adding items to the cart.

Wishlist Management: Testing the ability to add and remove items from the personal wishlist, ensuring the list persists across different sessions.

2.1.6 Shopping Cart & Checkout Process

Cart Operations: Testing adding items, updating quantities (e.g., 1 to 5 units), and ensuring the price recalculates automatically.

Transactional Flow: Validating the shipping details form (address, phone, ZIP code) and the selection of different shipping methods.

Payment & Confirmation: Testing the UI flow of payment selection and the final appearance of the "Order Confirmation" success message.

2.1.7 User Account & Notifications

Profile Management: Testing the ability for users to view and edit their personal profile information.

Order History: Verifying that past orders are displayed with the correct status and details.

Messaging System: Ensuring that error and success messages are clear, localized, and visible to the user during various interactions.

Testing tree

- **1. Site Access & Availability**
  - Homepage loading
  - Browser compatibility
  - Responsive layout
  - Error handling (404 / 500)
- **2. User Registration**
  - Valid registration flow
  - Invalid email format
  - Weak password validation
  - Mandatory fields validation
- **3. Login & Logout**
  - Valid login
  - Invalid credentials
  - Logout functionality
- **4. Password Recovery**
  - Reset with valid email
  - Invalid email handling
- **5. Navigation & Menus**
  - Main menu navigation
  - Sub-category navigation
  - Logo redirect to homepage

6. Product Search

- Search existing product
- Search non-existing product
- Special characters handling

7. Filters & Sorting

- Filter by size, color, price
- Sorting by price and popularity
- Clear filters

8. Product Page

- Product images gallery
- Price and discount display
- Size and color selection
- Product description visibility

9. Shopping Cart

- Add item to cart
- Update item quantity
- Remove item from cart

10. Checkout Process

- Shipping details form
- Shipping method selection
- Payment process
- Order confirmation message

11. User Account
- View and edit profile
- Order history display

12. Wishlist
- Add item to wishlist
- Remove item from wishlist

13. Notifications & Messages
- Error messages clarity
- Success messages display

14. Security & Session
- Restricted access for guests
- Session handling

Working with TestRail

For my QA project testing the Shein website, I utilized TestRail, an advanced, industry-standard Test Management Tool, for end-to-end management of the testing
lifecycle:

- **Test Organization:** Creating and structuring Test Cases under logical modules (e.g., User Registration, Site Access & Availability, Browser Compatibility).
- **Test Execution Management:** Setting up Test Runs and Milestones to group relevant tests for specific execution cycles.
- **Documentation & Tracking:** Recording real-time statuses for test steps and monitoring overall execution progress.

Analyzing the Results Graphs (Test Run Metrics)

The pie charts in the screenshots provide a clear, visual snapshot of the System Health and the execution status for those specific test cycles. Here is a breakdown of the data:

- **Passed Tests (Green):** The graphs indicate a high pass rate (92% and 93%, representing 197 and 175 test cases, respectively). This demonstrates that the core functionalities in the tested modules are working correctly according to the defined requirements.
- **Failed Tests (Red):** These represent the test cases (approximately 7%-8% in these runs) where the Actual Result did not match the Expected Result. For instance, the first screenshot highlights a failure in the phone number format validation during registration. These failures serve as the basis for reporting Defects/Bugs for further handling.
- **Execution Coverage (Untested):** On the right side of both screens, it shows that 100% of the assigned tests were executed ("0 Untested"). Furthermore, there are no "Blocked" or "Skipped" tests, which indicates a highly stable testing environment that enabled smooth, continuous QA work.

Working with Jira

For my QA project testing the Shein website, I worked with Jira, which is the leading industry tool for Bug Tracking and software development management. Throughout the project, we used Jira to manage the Defect Life Cycle for issues identified during system testing:

- **Issue Creation:** Systematically documenting every identified bug, including writing concise and accurate titles (Summaries) that clearly describe the problem.
- **Classification & Prioritization:** Defining the Severity level of each defect to help the development team understand which issues require immediate attention.
- **Team Collaboration & Tracking:** Working together on a shared defect repositoryandmonitoringthe status of each reported issue.

Defect Log Analysis

The attached screenshots display an Issue List (Defect Log) rather than a graphical chart. This log presents a snapshot of the open bugs in the system, demonstrating the ability to identify, report, and classify complex defects. Here is a breakdown of what the log reflects:

- **Severity Classification:** The list is professionally categorized by different severity levels, ranging from S2-Critical (severe defects impacting core processes like login and security), through S3-Major (issues impairing significant functionality like extreme price jumps or browser performance), down to S4-Minor / S5-Low (UI glitches, minor layout breaks, or missing visual feedback).
- **Reporting Quality (Summary):** The bug titles are written professionally, clearly, and concisely. Each title explicitly explains the exact nature of the failure (e.g., "Price slider exhibits extreme sensitivity"), reflecting a solid understanding of how to write standard bug reports that developers can easily comprehend.
- **Broad Test Coverage:** The list indicates that various aspects of the system were thoroughly tested, including functionality (filters, shopping cart), security (password validation), compatibility (different viewports and browsers), and performance (page load times).

Work	Reporter	Severity
SHEIN-25 Price Slider filter is inaccurate: Products exceed the maximum threshold set by the slider	Dima Nabutovsky	S2-Critical
SHEIN-24 Filter Inconsistency: Selecting "Black" color filter returns "No results found" despite available stock	Dima Nabutovsky	S2-Critical
SHEIN-8 (T1161)Missing Account Lockout and Support Redirection after Multiple Failed Login Attempts	Yulia Rudenko	S2-Critical
SHEIN-6 (T1149)Password reset can be performed when entering an invalid email	Yulia Rudenko	S2-Critical
SHEIN-4 (T1097)Verification code sent to non-existent or incorrect phone number	Yulia Rudenko	S2-Critical
SHEIN-1 (T1108) duplicate Account Creation via Existing Phone Number	Yulia Rudenko	S2-Critical
SHEIN-32 Missing accessibility support and "Help" options on 404 Error Pages	Dima Nabutovsky	S3-Major
SHEIN-28 Price: Low to High" sorting functionality is broken/ignored in category view	Dima Nabutovsky	S3-Major
SHEIN-27 Price slider exhibits extreme sensitivity and illogical price jumps (e.g., up to 24,000 ILS)	Dima Nabutovsky	S3-Major
SHEIN-26 Price sorting is inconsistent and follows alphabetical order instead of numerical value	Dima Nabutovsky	S3-Major
SHEIN-22 Product filtering failure: System displays incorrect colors when multiple filters (Color + Size) are applied	Dima Nabutovsky	S3-Major
SHEIN-21 Security Flaw: Password field incorrectly trims trailing spaces during login	Dima Nabutovsky	S3-Major
SHEIN-20 System fails to send subsequent "Account Lock/Password" emails despite success message displayed to ...	Dima Nabutovsky	S3-Major
SHEIN-15 Extreme performance degradation and slow page load times specifically on Firefox browser	Dima Nabutovsky	S3-Major
SHEIN-14 (T1218)Inconsistency Between Product Description and Visuals	Yulia Rudenko	S3-Major
SHEIN-11 (T1181)System performs search and returns results for empty search queries	Yulia Rudenko	S3-Major
SHEIN-9 (T1175)Active filters are reset/cleared when performing a new search	Yulia Rudenko	S3-Major
SHEIN-7 (T1160)System fails to block or throttle users after multiple consecutive password reset attempts.	Yulia Rudenko	S3-Major
SHEIN-5 (T1127)excessively long email adresses with 256 characters is not accepted	Yulia Rudenko	S3-Major
SHEIN-3 (T1092)System allows registration with an invalid email domain	Yulia Rudenko	S3-Major
SHEIN-31 Missing "Unsaved Changes" warning: Data is lost when navigating away from an unsaved form	Dima Nabutovsky	S4-Minor
SHEIN-29 Browser "Back" button fails to restore previous filter state (History API Issue)	Dima Nabutovsky	S4-Minor
SHEIN-18 Login process is not triggered by "Enter" key after entering credentials	Dima Nabutovsky	S4-Minor
SHEIN-17 Text overflow and layout breaking on small viewports (250px and below)	Dima Nabutovsky	S4-Minor
SHEIN-16 Banner overlapping (UI Collision) on viewports wider than 500px	Dima Nabutovsky	S4-Minor
SHEIN-13 (T1186)Search engine fails to recognize Emoji-based queries	Yulia Rudenko	S4-Minor
SHEIN-12 (T1185)Search engine lacks "Did you mean" functionality for misspelled queries	Yulia Rudenko	S4-Minor
SHEIN-10 (T1180)Removing filer resets category results to default instead of maintaining current category search	Yulia Rudenko	S4-Minor
SHEIN-33 (T1091) Missing Validation for Phone Number Format during Registration	Yulia Rudenko	S5- Low
SHEIN-30 Quantity field silently ignores "0" input without user feedback	Dima Nabutovsky	S5- Low

ITEM	DETAILS
Website url	http: //il.shein.com
Browser versions	Microsoft Edge, Google Chrome, Firefox

Lessons Learnt & Recommendations

ISSUES FACED	SOLUTION
Lack of phone number validation during registration: The system allows entering a random, invalid sequence of numbers in the phone field without format validation. This leads to saving corrupted data and prevents the business from sending OTP codes or contacting the customer.	**Validation check and feedback:** The system should verify that the input matches a valid phone format. If the format is incorrect, an explicit error message (such as "Please enter a valid number") should be displayed, and the registration process should be blocked until the field is corrected.
Lack of accessibility and "Help" options on 404 error pages: The error pages are not adapted for screen readers and do not provide context for the problem. Additionally, there is no clear guidance or shortcuts to support for users with disabilities.	**Accessibility adaptation:** The screen reader should automatically and immediately announce the error upon page load. Also, a clear "Need help?" button or a direct link to a support representative, or an accessible FAQ page should be added.
Data loss in unsaved forms: Navigating to another page or clicking the browser's "back" button while filling out a form occurs without any warning. As a result, the information entered by the user is lost, creating a negative user experience.	**Adding an unsaved changes alert:** A warning dialog (browser alert or custom modal) should be displayed, warning that there are unsaved changes and asking the user if they are sure they want to leave the page. The dialog should include clear options - "Stay" or "Leave".
Ignoring the digit "0" typed in the quantity field: The quantity field in the shopping cart ignores the user typing "0" without displaying any feedback or error message, creating a confusing response to keyboard input.	**Providing feedback to the user:** The system should not silently ignore the input, but rather display a clear error message or alternatively offer an automatic alternative action (such as removing the item from the cart if the quantity is 0).
Inaccurate price filtering ("Leaky filter"): The price slider fails to properly block products that exceed the defined maximum limit. Products more expensive than the set threshold appear in the results.	**UI and Server synchronization:** Full alignment must be ensured between the slider component and the backend filtering query. Results should be strictly capped at the defined maximum value, and automated testing for boundary values should be added.

Lessons Learnt & Recommendations

ISSUES FACED	SOLUTION
Incorrect color filter returning an empty page: Selecting a specific color filter (such as "Black") returns an empty page with a "no results" error message, even though relevant products are in stock and visible in the general category view.	**Checking product metadata:** Product color tagging in the database must be verified to ensure they are correctly identified by the filtering system. Regression tests should be added to ensure basic filters return results when stock is available.
Security vulnerability - Missing account lockout: The system allows repeated failed login attempts or password reset requests, without any blocking mechanism or redirection to technical support.	**Applying security policy:** A protection mechanism must be implemented, such as an account lockout after a defined number of failed attempts. It is also recommended to integrate measures like CAPTCHA to prevent brute-force attacks.
Accepting invalid email addresses in critical processes: The system allows users to proceed with password recovery and verification code processes even when an email with a non-existent or invalid domain is entered.	**Strict input validation:** The system must prevent the acceptance of invalid email addresses. It should verify not only the email format but also add a basic validation layer for domain correctness before sending sensitive data.
Poor handling of combined data and duplicate account creation: The system allows completing registration using a fictitious email alongside a phone number already in use by another account. Additionally, in the bug report itself, there is confusion between "Expected Result" and "Actual Result", which are phrased inversely to logical business requirements.	**Defining dual validation rules and improving reporting:** At the system level, phone number duplicates must be validated separately from email addresses, blocking registration accordingly. At the QA level, it is mandatory to ensure that the "Expected Result" always reflects the correct and desired business behavior (blocking the invalid action) so developers understand the essence of the required fix.

Exit Criteria

The testing phase for the SHEIN E-commerce platform is considered complete, and the system is evaluated for deployment readiness based on the following criteria:

- **Test Execution Completeness:** 100% of the planned test cases (399 in total) have been executed. Zero test cases remain in a "Not Run" status.
- **Defect Resolution:** Zero (0) "Show Stopper" bugs are active. All 5 "Critical" and 15 "Major" defects have been formally logged in Jira with detailed reproduction steps and screenshots. All fixes are managed based on the Severity/Priority matrix.
- **Functional Coverage:** All in-scope modules, including Site Access, User Registration, Navigation, Product Detail Page (PDP), and Shopping Cart/Checkout, have been rigorously tested.
- **Platform Compatibility:** Cross-browser validation (Chrome, Firefox, Safari, Edge) and responsive layout tests (Desktop, Tablet, Mobile) have been successfully completed on the Staging Environment.
- **Deliverables Validation:** The core documentation, including Step-by-Step Test Descriptions (STDs) in TestRail, Bug Reports, Metrics, and Lessons Learnt, has been fully compiled in the Software Test Report (STR)

Conclusion / Sign Off

Testing Summary: The QA testing cycle for the SHEIN E-commerce platform has been successfully completed. A total of 399 test cases were executed. Out of these, 370 test cases passed and 29 failed.

Quality Assessment & Defect Status: During the execution phase, 29 defects were identified and logged. The defect breakdown by severity is as follows:

- Show Stopper: 0
- Critical: 5
- Major: 15
- Minor: 7
- Low: 2

Key issues identified during testing include a lack of phone number validation during registration , missing account lockouts for security, and data loss in unsaved forms.

Go/No-Go Recommendation: Based on the current defect density and the presence of 5 Critical and 15 Major bugs, the system is evaluated as a No-Go for production deployment at this stage. Deployment is not recommended until all Critical and Major defects are fully resolved and successfully retested to ensure the platform's stability and secure user experience.

ID	Title	Section	Status
T690	Verify that the homepage fully loads in under 3 seconds on a standard internet connection.	Homepage loading	Passed
T691	Verify that the main promotional banner (#Trends) is displayed correctly without any broken images.	Homepage loading	Passed
T692	Verify that the search bar and menus become clickable immediately upon appearing, even if the rest of the page is still loading.	Homepage loading	Passed
T693	Verify that all navigation icons (Women, Men, Kids, etc.) are displayed clearly and lead to the correct subcategories.	Homepage loading	Passed
T694	Verify that the correct currency (e.g., ILS/USD) and theappropriate language are displayed according to theuser's location or settings upon page load.	Homepage loading	Passed
T695	Verify that the homepage layout remains consistent andfunctional across different browsers (Chrome, Firefox,Edge).	Browser compatibility	Passed
T696	Verify that all fonts and icons are rendered correctly andremain consistent across different browsers.	Browser compatibility	Passed
T697	Verify that CSS animations (such as rotating banners) runsmoothly across all browser types.	Browser compatibility	Passed
T698	Verify that the browser's 'Back' and 'Forward' buttonsfunction correctly without breaking the site's layout.	Browser compatibility	Passed
T699	Verify that the site loads securely (HTTPS) and displaysthe padlock icon in the address bar across all browsers.	Browser compatibility	Passed

ID	Title	Section	Status
T700	Verify that images and icons (such as the cart and wishlisticons) are displayed correctly, without distortions ormissing elements, across all tested browsers.	Browser compatibility	Passed
T701	Verify that page load times are reasonable and consistentacross different browsers (ensuring no specific browser issignificantly slower than others).	Browser compatibility	**Failed**
T702	Please verify that the page content adapts seamlessly tothe browser window width when manually resizing thewindow.	Responsive layout	Passed
T703	Verify that the top navigation menu collapses into a'hamburger menu' (three-line icon) when the screenwidth is below the defined breakpoint.	Responsive layout	Passed
T704	Verify that no horizontal scrollbar appears at the bottomof the browser; all content must stack vertically.	Responsive layout	Passed
T705	Verify that images and promotional banners resizeproportionally and are not stretched or incorrectlycropped.	Responsive layout	Passed
T706	Verify that buttons and links maintain minimum spacingfrom each other to prevent accidental clicks in narrowviewports.	Responsive layout	**Failed**
T707	Verify that long texts (such as product names) do notoverflow their container boundaries or get truncated inan unreadable way.	Responsive layout	**Failed**
T708	Verify that the product grid automatically adjusts thenumber of columns (e.g., from 4 columns on full screento 2 columns in a narrow window).	Responsive layout	Passed

ID	Title	Section	Status
T709	Verify that the search bar remains accessible andreadable even when the browser window is narrowed toits minimum width.	Responsive layout	Passed
T710	Verify that floating elements (such as the 10% discountbutton or Chat widget) do not overlap or hide importantcontent and Call-to-Action (CTA) buttons on narrowscreens.	Responsive layout	Passed
T711	Verify that all web components (such as promotionalpop-ups) open in the center of the screen and are scaledto fit the current window size.	Responsive layout	Passed
T712	Verify that a custom-designed 404 error page is displayedwhen attempting to access a non-existent URL.	Error handling (404 / 500)	Passed
T713	Verify that the 404 error page includes a 'Back to Home'button or a search bar to assist the user.	Error handling (404 / 500)	Passed
T714	Verify that the website displays a clear 'No InternetConnection' alert if the network disconnects duringbrowsing.	Error handling (404 / 500)	Passed
T715	Verify that error messages do not expose sensitive technical information about the server or the database.	Error handling (404 / 500)	Passed
T716	Verify that the user is able to log in successfully afterentering valid email and password credentials.	Valid login	Passed
T717	Verify that the system maintains the logged-in state evenafter a page refresh or when navigating betweendifferent categories on the site.	Valid login	Passed

ID	Title	Section	Status
T718	Verify that the user is redirected to the homepage or theMy Account page immediately after entering valid emailand password credentials and clicking Login.	Valid login	Passed
T719	Verify that the logged-in username is correctly displayedin the website header after authentication.	Valid login	Passed
T720	Verify that the system enforces case sensitivity forpasswords (for example: Pass123 is different frompass123).	Valid login	Passed
T721	Verify that checking the Remember Me checkbox savesthe user credentials in the browser for the next login.	Valid login	Passed
T722	Verify that pressing the Enter key on the keyboard after entering credentials triggers the login process exactly like clicking the Login button.	Valid login	**Failed**
T723	Verify that the user is redirected to the homepage or the My Account page immediately after a successful login.	Valid login	Passed
T724	Verify that the system allows logging in with an email address containing valid special characters, such as user.name+test@domain.com.	Valid login	Passed
T725	Verify that the system allows logging in with a password of the maximum permitted length, such as 50 characters.	Valid login	Passed
T726	Verify that login is successful even if the user enters spaces before or after the email address, as the system should automatically trim them.	Valid login	Passed

ID	Title	Section	Status
T727	Verify that the user is able to log in again immediately after performing a password reset using the new password.	Valid login	Passed
T728	Verify that the system blocks the login attempt and displays an error message when the email is valid but the password is incorrect.	Valid login	Passed
T729	Verify that the system displays an error message for an invalid email format (for example: test@com- without a dot suffix).	Valid login	Passed
T730	Verify that login is not possible when one of the fields (email or password) is left empty.	Valid login	Passed
T731	Verify that the system blocks repeated login attempts (e.g., 5 times) with an incorrect password and locks the account for a specified duration.	Valid login	**Failed**
T732	Verify that login is not permitted with an existing email address that has not yet undergone email verification, if the site requires it.	Valid login	Passed
T733	Verify that a clear error message (such as Incorrect email or password) is displayed when an email address that does not exist in the system is entered.	Invalid credentials	Passed
T734	Verify that the system displays an alert when the email or password fields are left empty upon clicking the login button.	Invalid credentials	Passed
T735	Verify that login is not possible with an incorrect password, even if the email address is valid.	Invalid credentials	Passed

ID	Title	Section	Status
T736	Verify that login is not possible with an incorrect password, even if the email address is valid.	Invalid credentials	Passed
T737	Verify that the password is displayed as dots or asterisks (Masking) during typing to protect user privacy.	Invalid credentials	Passed
T738	Verify that the system allows logging in with a passwordcontaining only special characters (for example:!@#$%^&*), provided that the password policy permitsit.	Invalid credentials	Passed
T739	Verify that the system allows logging in after a passwordreset when the user uses the temporary password sentto them via email.	Invalid credentials	Passed
T740	Verify that it is possible to log in from an Incognito window even if third-party cookies are blocked in the browser.	Invalid credentials	Passed
T741	Verify that the system blocks the login attempt when thepassword is correct but contains an additional trailingspace (unlike email, a space in a password is a validcharacter).	Invalid credentials	**Failed**
T742	Verify that it is not possible to log in with a password that is too common (such as 123456), if a password strength policy is implemented on the site.	Invalid credentials	Passed
T743	Verify that the system displays a generic error message (such as Invalid login credentials) and does not specify which field is incorrect (email or password), to prevent enumeration attacks.	Invalid credentials	Passed
T744	Verify that a login attempt with an email missing a domain suffix (e.g., user@domain) is blocked at the form validation level.	Invalid credentials	Passed

ID	Title	Section	Status
T745	Verify that clicking the Logout button redirects the userto the homepage (or login page) as an anonymous user.	Logout functionality	Passed
T746	Verify that the system displays a confirmation messagefor a successful logout (if defined in the specifications).	Logout functionality	Passed
T747	Verify that after logging out, the Login button reappearsin the header instead of the username.	Logout functionality	Passed
T748	Verify that clicking the Logout button clears user-specificdata from the display (such as point balance or Wishlistitems).	Logout functionality	Passed
T749	Verify that the system performs an automatic logout(Session Timeout) after a defined period of inactivity onthe site.	Logout functionality	Passed
T750	Verify that logging out in one browser tab automaticallylogs the user out from all other open tabs of the samewebsite.	Logout functionality	Passed
T751	Verify that if the user is logged in via Google/Facebook,clicking Logout disconnects them from the website onlyand not from their external social account.	Logout functionality	Passed
T752	Verify that the logout is successful even if the user haspending items in the shopping cart (the cart should besaved in the account for the next login).	Logout functionality	Passed
T753	Verify that clicking the browser's ""Back"" button afterlogging out does not allow viewing secured pages (suchas order history).	Logout functionality	Passed

ID	Title	Section	Status
T754	Verify that attempting to access a direct URL of apersonal page (e.g., shein.com/my-orders) after loggingout leads to an error page or the login page.	Logout functionality	Passed
T755	Verify that if the user logs out while a checkout process isopen in another tab, the system blocks the transactionand requests re-authentication.	Logout functionality	Passed
T756	Verify that manually deleting cookies in the browserresults in an immediate logout (ensuring there is noreliance solely on client-side validation).	Logout functionality	Passed
T757	Verify that clicking each of the main categories (e.g.,Women, Men, Kids) redirects the user to the correctlanding page.	Main menu navigation	Passed
T758	Verify that hovering over a main category opens adropdown menu containing the relevant sub-categories.	Main menu navigation	Passed
T759	Verify that clicking the SHEIN logo from any page on thesite redirects the user back to the homepage.	Main menu navigation	Passed
T760	Verify that the selected category is highlighted (ActiveState) to indicate the user's current location within thesite.	Main menu navigation	Passed
T761	Verify that the main menu remains fixed to the top of thescreen (Sticky Header) while scrolling down, to allowquick navigation between departments.	Main menu navigation	Passed
T762	Verify that it is possible to navigate through all menuitems using the Tab key (Accessibility Testing).	Main menu navigation	Passed

ID	Title	Section	Status
T763	Verify that each sub-category in the dropdown menu redirects to the correctly filtered page (e.g., clicking ""Dresses"" under ""Women"" displays only dresses).	Main menu navigation	Passed
T764	Verify that switching between main categories (e.g., Women to Men) occurs without significant delay and without re-rendering the entire Header component.	Main menu navigation	Passed
T765	Verify that clicking on empty spaces between menucategories performs no action and does not trigger anynavigation errors.	Main menu navigation	Passed
T766	Verify that the sub-menu closes automatically when theuser moves the mouse pointer out of the menu area(Mouse-out).	Main menu navigation	Passed
T767	Verify that if a user attempts to access a non-existent or removed category via a direct URL, the system redirects them to the homepage or displays a 404 error page.	Main menu navigation	Passed
T768	Verify that menu elements (such as exceptionally longtext) do not overlap each other or exceed screenboundaries on lower desktop resolutions.	Main menu navigation	Passed
T769	Verify that hovering over a main category opens a sub-menu containing all relevant sub-categories.	Sub-category navigation	Passed
T770	Verify that clicking a specific sub-category (e.g., ""T-shirts"") redirects to a product page containing onlyitems belonging to that category.	Sub-category navigation	Passed
T771	Verify that the page title changes accordingly to theselected sub-category.	Sub-category navigation	Passed

ID	Title	Section	Status
T772	Verify that a visual indication (such as a color change orunderline) appears when hovering over a sub-categoryname.	Sub-category navigation	Passed
T773	Verify that the sub-category menu displays thumbnails(Icons) next to the text, if applicable per specifications,and that they load correctly.	Sub-category navigation	Passed
T774	Verify that it is possible to navigate to and select a sub-category using the keyboard only (Arrow keys and Enter).	Sub-category navigation	Passed
T775	Verify that if a sub-category list is very long, an internalscrollbar or a multi-column layout appears, allowing alloptions to be visible.	Sub-category navigation	Passed
T776	Verify that the Breadcrumbs menu correctly updates thenavigation path (e.g., Home > Women > Lingerie).	Sub-category navigation	Passed
T777	Verify that the sub-category menu does not closeunexpectedly while the user moves the mouse within themenu boundaries.	Sub-category navigation	Passed
T778	Verify that if a specific sub-category contains noproducts, the system displays an appropriate message(""No products in this category"") instead of a brokenpage.	Sub-category navigation	Passed
T779	Verify that the sub-menu does not exceed screenboundaries (Overflow) and does not require horizontalscrolling to view all links.	Sub-category navigation	Passed
T780	Verify that clicking ""X"" or the area outside the menu (inspecific view modes) closes the sub-menu smoothly.	Sub-category navigation	Passed

ID	Title	Section	Status
T781	Verify that clicking the site logo from any inner page (e.g.,product page, shopping cart, or ""Contact Us"") redirectsthe user back to the homepage.	Logo redirect to homepage	Passed
T782	Verify that the mouse cursor changes to a ""Pointer"" (hand icon) when hovering over the logo, to indicate it isclickable.	Logo redirect to homepage	Passed
T783	Verify that the logo is displayed correctly and clearlyacross all site pages (no broken images).	Logo redirect to homepage	Passed
T784	Verify that clicking the logo while the user is already onthe homepage refreshes the page or keeps the user onthe same page without errors.	Logo redirect to homepage	Passed
T785	Verify that the logo can be clicked and opened in a newtab (Right click -> Open in new tab) and correctlyredirects to the homepage.	Logo redirect to homepage	Passed
T786	Verify that the logo remains clickable and accessible evenwhen the header becomes ""Sticky"" during downwardscrolling.	Logo redirect to homepage	Passed
T787	Verify that the link embedded in the logo includes an alttag with the site name (e.g., ""SHEIN Home"") foraccessibility and SEO purposes.	Logo redirect to homepage	Passed
T788	Verify that clicking the logo does not cause the user to belogged out (Session termination) or result in the clearingof the shopping cart.	Logo redirect to homepage	Passed
T789	Verify that if the logo fails to load (due to server/internetissues), clickable alternative text is available, allowing theuser to return to the homepage.	Logo redirect to homepage	Passed

ID	Title	Section	Status
T790	Verify that clicking the logo while another page is loadinginterrupts the previous loading process and smoothlyredirects the user to the homepage without ""freezes.""	Logo redirect to homepage	Passed
T791	Verify that selecting a specific size (e.g., S or 38) displaysonly products currently in stock for that size.	Filter by size, color, price	Passed
T792	Verify that selecting a specific color from the colorpalette updates the list and displays only productsavailable in the chosen color.	Filter by size, color, price	**Failed**
T793	Verify that entering a price range (e.g., 50-150 ILS) filtersthe results and displays only products within therequested price range.	Filter by size, color, price	**Failed**
T794	Verify that it is possible to select multiple options withinthe same filter (e.g., selecting both ""Black"" and""White"" simultaneously).	Filter by size, color, price	**Failed**
T795	Verify that a combination of all three filters (Size L + RedColor + Price up to 100 ILS) works cumulatively anddisplays accurate results.	Filter by size, color, price	Passed
T796	Verify that filtering by ""Color"" updates the product'smain image in the list to the selected color (if thespecification requires it).	Filter by size, color, price	Passed
T797	Verify that using the price slider updates the productresults in real-time (Live Update) or upon clicking""Apply.""	Filter by size, color, price	**Failed**
T798	Verify that the system persists the selected filters evenwhen the user navigates between result pages (Page 1, 2,etc.).	Filter by size, color, price	Passed

ID	Title	Section	Status
T799	Verify that the price slider in a specific category displays logical price ranges (e.g., the minimum and maximum values reflect the actual prices of products in that category).	Filter by size, color, price	**Failed**
T800	Verify that if a combination is selected for which no products exist (e.g., Size XS, Olive Green, and a price range of 10 ILS), a ""No results found"" message appears instead of a blank or broken page.	Filter by size, color, price	Passed
T801	Verify that removing a single filter (clicking the ""X"") refreshes the list without canceling the other active filters.	Filter by size, color, price	Passed
T802	Verify that selecting ""Price: Low to High"" sorting displays the cheapest product at the beginning of the list.	Sorting by price and popularity	**Failed**
T803	Verify that selecting ""Price: High to Low"" sorting displays the most expensive product at the beginning of the list.	Sorting by price and popularity	Passed
T804	Verify that selecting ""Popularity"" or ""Best Selling"" sorting displays the most sold or highest-rated products at the top of the list.	Sorting by price and popularity	Passed
T805	Verify that the default sorting option (e.g., ""Recommended for You"" or ""New Arrivals"") is automatically applied upon entering a category.	Sorting by price and popularity	Passed
T806	Verify that the system maintains the selected sorting order even when the user navigates between pages (Pagination) within the same category.	Sorting by price and popularity	Passed
T807	Verify that the sorting functions correctly even after filters have been applied to the product list.	Sorting by price and popularity	Passed

ID	Title	Section	Status
T808	Verify that ""Sale"" products are sorted based on their final price (after discount) rather than their original price.	Sorting by price and popularity	Passed
T809	Verify that if two products have identical prices, the system displays them side-by-side without any sorting errors.	Sorting by price and popularity	Passed
T810	Verify that changing the sorting order does not cause products to disappear from the list or display products unrelated to the category.	Sorting by price and popularity	Passed
T811	Verify that the site does not display a ""Timeout"" error or crash when attempting to sort an exceptionally large category (containing thousands of products).	Sorting by price and popularity	Passed
T812	Verify that clicking the sorting button without selecting an option (e.g., clicking outside the menu) does not change the existing product order.	Sorting by price and popularity	Passed
T813	Verify that if a specific product has no popularity data (e.g., a brand-new product), it appears at the end of the list when sorted by popularity and does not cause a display error.	Sorting by price and popularity	Passed
T814	Verify that clicking the ""Clear All"" button removes all selected filters (size, color, price, etc.) simultaneously.	Clear filters	Passed
T815	Verify that clicking the ""X"" next to an individual filter removes only specific filter while keeping the others active.	Clear filters	Passed
T816	Verify that after clearing the filters, the product list returns to displaying all the original items in the category.	Clear filters	Passed

ID	Title	Section	Status
T817	Verify that the product counter updates back to the original number after clearing the filters.	Clear filters	Passed
T818	Verify that the ""Clear All"" button appears only when at least one filter is active and disappears when no filters are selected.	Clear filters	Passed
T819	Verify that clearing the filters returns the user to the first page of results (if they were on an advanced page while the filters were active).	Clear filters	Passed
T820	Verify that clearing the filters does not change the selected sorting order (e.g., if ""Price: Low to High"" was selected, the order should persist even after filters are cleared).	Clear filters	Passed
T821	Verify that if the user used the price slider, clearing the filters resets the slider to its original minimum and maximum values.	Clear filters	Passed
T822	Verify that rapidly clicking ""Clear All"" multiple times does not cause a server error or freeze the browser.	Clear filters	Passed
T823	Verify that if the user clears the filters and clicks the browser's ""Back"" button, they return to the state with the active filters (Testing State History preservation).	Clear filters	**Faild**
T824	Verify that clearing the filters does not cause products from unrelated categories to be displayed on the current page.	Clear filters	Passed
T825	Verify that the clearing action is performed smoothly even under network stress, without leaving ""ghost filters"" (remnants of previous filters) active.	Clear filters	Passed

ID	Title	Section	Status
T826	Verify that clicking the ""Add to Cart"" button adds the product to the basket with the exact size and color selected.	Add item to cart	Passed
T827	Verify that the item count in the Cart Counter (header icon) increments by 1 immediately upon adding a product.	Add item to cart	Passed
T828	Verify that clicking ""Add to Cart"" from the product list (Quick Add) adds the default item to the cart without requiring the user to enter the Product Detail Page (PDP).	Add item to cart	Passed
T829	Verify that the same product can be added multiple times from the Product Detail Page (PDP), and the quantity in the cart updates accordingly (e.g., clicking twice changes the quantity to 2).	Add item to cart	Passed
T830	Verify that a product can be added to the cart as a ""Guest"" user without being logged into an account.	Add item to cart	Passed
T831	Verify that if the user adds a product, logs out, and then logs back in, the product remains in their cart (Persistent Cart).	Add item to cart	Passed
T832	Verify that a product can be added to the cart directly from the Wishlist.	Add item to cart	Passed
T833	Verify that a product cannot be added to the cart without selecting a size or color (an error message should appear next to the missing field).	Add item to cart	Passed
T834	Verify that the ""Add to Cart"" button is disabled or replaced with a ""Sold Out"" button for products that are out of stock.	Add item to cart	Passed

ID	Title	Section	Status
T835	Verify that a very rapid double-click on the ""Add to Cart"" button does not accidentally add the product twice (Prevention of duplicate actions).	Add item to cart	Passed
T836	Verify that if the user tries to add a product that was removed from the site while the page was open, an appropriate error message appears and the item is not added.	Add item to cart	Passed
T837	Verify that clicking the ""QTY"" (Quantity) button opens a selection menu/row for choosing the quantity.	Update item quantity	Passed
T838	Verify that if the quantity can be typed manually in the field, the total cart price updates immediately after pressing ""Enter"" or exiting the field (Blur event).	Update item quantity	Passed
T839	Verify that the final cart total (Total) correctly accounts for the updated quantities of all products.	Update item quantity	Passed
T840	Verify that if updating the quantity causes the user to exceed the ""Free Shipping"" threshold, the system automatically updates the shipping cost to 0.	Update item quantity	Passed
T841	Verify that the quantity can be updated to the maximum number allowed on the site (e.g., 99) and that the cart's design remains intact (the number does not ""overflow"" or break the layout).	Update item quantity	Passed
T842	Verify that after changing the quantity and refreshing the page, the system remembers the newly selected quantity.	Update item quantity	Passed
T843	Verify that if the user attempts to enter a quantity greater than the available stock (e.g., requested 20 when only 5 are available), the system displays a warning message and updates the quantity to the maximum possible amount.	Update item quantity	Passed

ID	Title	Section	Status
T844	Verify that non-numeric characters (such as letters,spaces, or symbols like - or +) cannot be entered into thequantity field.	Update item quantity	Passed
T845	Verify that manually entering ""0"" in the quantity fieldresults in either removing the item from the cart ordisplaying an error message.	Update item quantity	**Failed**
T846	Verify that rapid double-clicking on the quantity buttonsdoes not cause strange price jumps or calculation errorsbetween the client and the server.	Update item quantity	Passed
T847	Verify that clicking the removal button (trash icon or""Remove"" button) permanently deletes the productfrom the cart.	Remove item from cart	Passed
T848	Verify that after removing a product, the final cart total(Total) updates immediately and deducts the cost of theremoved item.	Remove item from cart	Passed
T849	Verify that the item counter in the Header (cart icon atthe top) updates to the correct number after an item isremoved.	Remove item from cart	Passed
T850	Verify that if the last product is removed from the cart,the user is automatically redirected to an ""Empty Cart""view that includes a ""Back to Shopping"" button.	Remove item from cart	Passed
T851	Verify that an item can be removed from the cart evenwith a slow internet connection (ensure no ""ghost""remains of the product on the page).	Remove item from cart	Passed
T852	Verify that after removing a product and refreshing thepage, the product does not reappear in the cart (theaction was saved on the server).	Remove item from cart	Passed

ID	Title	Section	Status
T853	Verify that if removing a product causes the cart to dropbelow the ""Free Shipping"" threshold, the shipping costis reapplied to the final calculation.	Remove item from cart	Passed
T854	Verify that clicking ""Undo"" (or ""X"" to restore) returnsthe product to the cart with all its original parameters(size, color, and quantity).	Remove item from cart	Passed
T855	Verify that rapid double-clicking on the ""Remove""button does not cause a system error or accidentallydelete another product.	Remove item from cart	Passed
T856	Verify that if the user opens the cart in two tabs,removing a product in one tab updates the cart in thesecond tab (after a refresh or page navigation).	Remove item from cart	Passed
T857	Verify that if the user attempts to remove a productwhile the system is performing an update (e.g.,calculating a coupon), the action does not get stuck andcompletes successfully.	Remove item from cart	Passed
T858	Verify that all personal data (full name, date of birth,gender, email) is displayed correctly and readably on theprofile page.	View and edit profile	Passed
T859	Verify that clicking the ""Edit"" button makes the fieldseditable or opens a dedicated edit form.	View and edit profile	Passed
T860	Verify that after clicking ""Save"", the changes areupdated in the database and correctly displayed on theprofile page without requiring a page refresh.	View and edit profile	Passed
T861	Verify that the user receives a confirmation message(Success Message) after successfully updating theirdetails.	View and edit profile	Passed

ID	Title	Section	Status
T862	Verify that the system accepts extra-long names ornames containing hyphens/apostrophes (e.g., Levi-Strauss).	View and edit profile	Passed
T863	Verify that if the user leaves the page without savingafter making changes, a browser alert appears asking ifthey are sure they want to leave.	View and edit profile	**Failed**
T864	Verify that mandatory fields (such as email or first name)cannot be deleted and left empty; the system mustdisplay an error message.	View and edit profile	Passed
T865	Verify that attempting to enter special characters or code(such as <script>) into the text fields is blocked by thesystem (XSS protection).	View and edit profile	Passed
T866	Verify that if the user attempts to change their emailaddress to one that already exists in the system underanother user, the action is blocked with an appropriatemessage.	View and edit profile	Passed
T867	Verify that every order appears with its basic details:order number, purchase date, total amount, and currentstatus (e.g., ""Processing"", ""Shipped"", ""Cancelled"").	Order history display	Passed
T868	Verify that clicking on a specific order opens ""OrderDetails"" and displays the list of purchased products,including images and prices.	Order history display	Passed
T869	Verify that the system displays the shipping address andthe payment method used for each order.	Order history display	Passed
T870	Verify that the full financial breakdown of the order isvisible: product prices, shipping fees, coupon discounts,and the grand total.	Order history display	Passed

ID	Title	Section	Status
T871	Verify that if the order has been shipped, a tracking linkappears that directs the user to the delivery company'swebsite.	Order history display	Passed
T872	Verify that a PDF invoice or receipt can be downloadedfor every completed order.	Order history display	**Passed**
T873	Verify that if the user has many orders, a paginationmechanism or a ""Load More"" button appears, and theorders are sorted from newest to oldest.	Order history display	Passed
T874	Verify that orders can be filtered by time period (e.g.,""Last 6 months"", ""Year 2025"") or by order status.	Order history display	Passed
T875	Verify that if a new user has no orders yet, a ""You haveno orders yet"" message appears with a buttonredirecting back to shopping.	Order history display	Passed
T876	Verify that if an order is cancelled or returned, the statusand refunded amounts are updated clearly to avoid userconfusion.	Order history display	Passed
T877	Verify that it is impossible to view other users' orderseven by guessing order numbers in the URL (CriticalSecurity Check).	Order history display	Passed
T878	Verify that if a product image from a past order no longerexists on the site (deleted product), the system displays a""Placeholder"" image instead of a ""broken image""	Order history display	Passed
T879	icon. Verify that when an error occurs (e.g., incorrectpassword), a clear and highlighted message appears(usually in red).	Error messages clarity	Passed

ID	Title	Section	Status
T880	Verify that the error message appears near the source ofthe problem (e.g., an ""Invalid email"" message shouldappear directly under the email field).	Error messages clarity	Passed
T881	Verify that the message is written in simple, user-friendlylanguage and does not include technical code or servererrors (e.g., ""Error 500"" or ""Null Pointer Exception"").	Error messages clarity	Passed
T882	Verify that error messages disappear automatically assoon as the user corrects the problematic field.	Error messages clarity	Passed
T883	Verify that error messages include a suggested solution(e.g., instead of ""Password error,"" display ""Incorrectpassword. Would you like to reset it?"").	Error messages clarity	Passed
T884	Verify that if there are multiple errors in the form, thesystem displays all of them at once rather than one byone (to prevent user frustration).	Error messages clarity	Passed
T885	Verify that error messages are properly read by a""Screen Reader"" for accessibility for users withdisabilities.	Error messages clarity	**Failed**
T886	Verify that the error message design (exclamation icon,color) is prominent enough to catch the user's eye butdoes not obscure important buttons.	Error messages clarity	Passed
T887	T887Verify that if there is a network error (no internet), ageneral and calming message appears explaining thecommunication issue, instead of the site simply""freezing.""	Error messages clarity	Passed
T888	T888Verify that the error message does not stay ""stuck"" onthe screen after the user navigates to another page orrefreshes the page.	Error messages clarity	Passed

ID	Title	Section	Status
T889	Verify that the error message content does not overflowthe screen boundaries (especially on mobile) and remainsfully readable.	Error messages clarity	Passed
T890	Verify that the system does not display conflicting errormessages (e.g., ""Field is required"" and ""Invalidformat"" at the same time, overlapping each other).	Error messages clarity	Passed
T891	Verify that after a positive action (such as saving a profileor adding to cart), a message appears confirming thesuccess of the action.	Success messages display	Passed
T892	Verify that the success message is visually prominent(usually using green color or a ""V"" icon) to distinguish itfrom error messages.	Success messages display	Passed
T893	Verify that the message text is specific to the actionperformed (e.g., ""Password changed successfully""instead of just ""Updated"").	Success messages display	Passed
T894	Verify that ""Toast"" messages (pop-up notifications thatdisappear) stay on the screen long enough for the user toread them (e.g., 3–5 seconds).	Success messages display	Passed
T895	T895 Verify that the success message includes an ""X"" buttonfor quick dismissal, in case the user wishes to continuetheir activity without waiting.	Success messages display	Passed
T896	T896 Verify that if the action requires a follow-up (such asregistration), the success message includes a link to thenext step (e.g., ""Registration successful! Click here to login"").	Success messages display	Passed
T897	Verify that the success message is displayed correctlywhether the user is at the top of the page or has scrolledto the bottom (Floating Message).	Success messages display	Passed

ID	Title	Section	Status
T888	Verify that the error message does not stay ""stuck"" onthe screen after the user navigates to another page orrefreshes the page.	Error messages clarity	Passed
T889	Verify that the error message content does not overflowthe screen boundaries (especially on mobile) and remainsfully readable.	Error messages clarity	Passed
T890	Verify that the system does not display conflicting errormessages (e.g., ""Field is required"" and ""Invalidformat"" at the same time, overlapping each other).	Error messages clarity	Passed
T891	Verify that after a positive action (such as saving a profileor adding to cart), a message appears confirming thesuccess of the action.	Success messages display	Passed

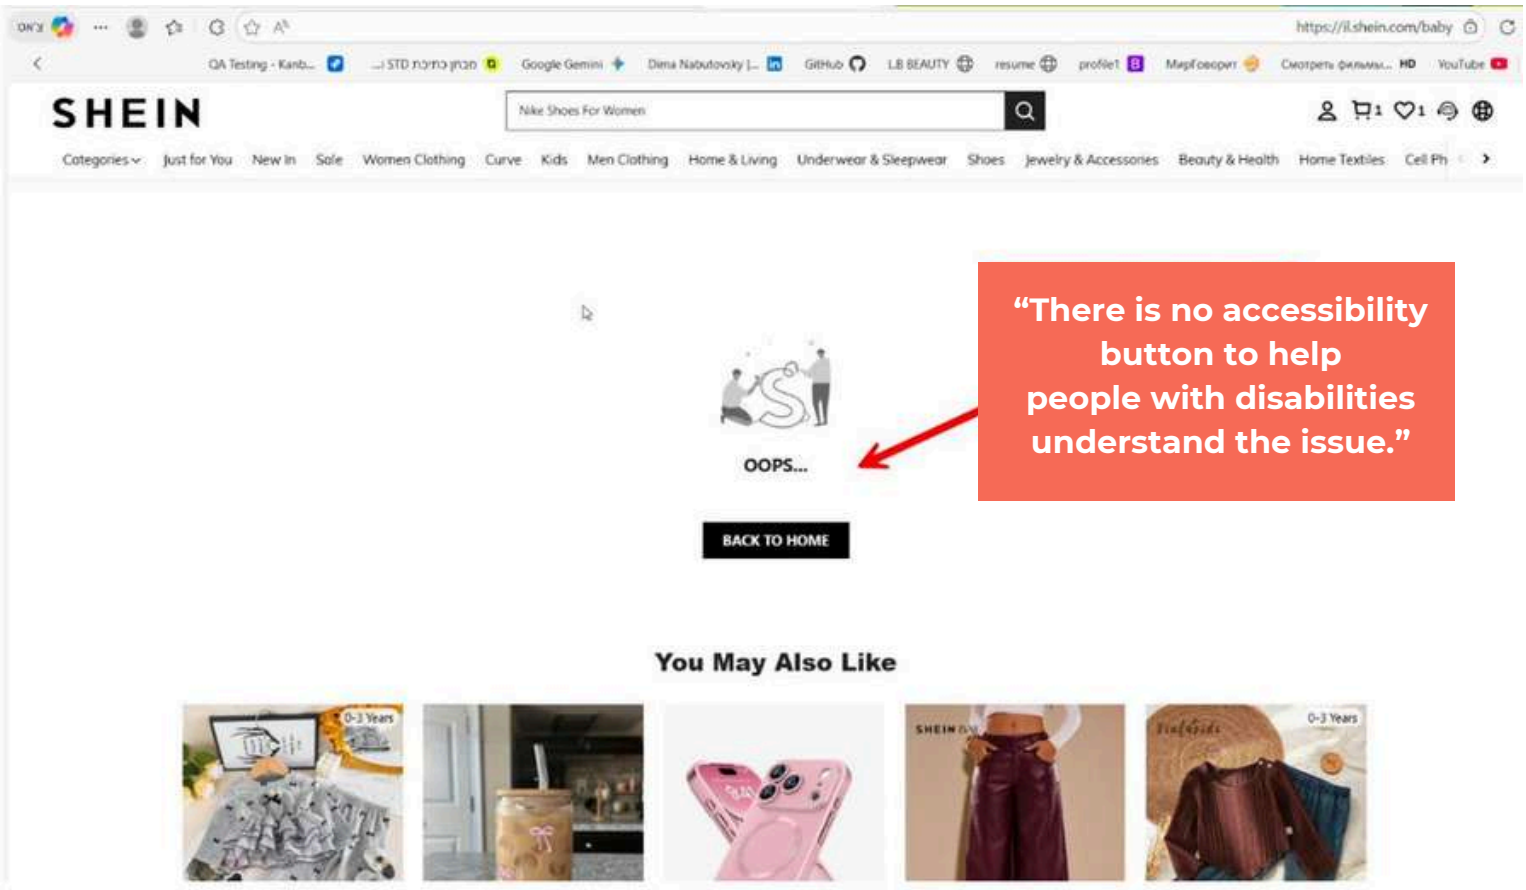
[SHEIN-32] Missing accessibility support and "Help" options on 404 Error Pages Created: 25/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S4 - Minor
Reporter:	Dima Nabutovsky	**Assignee:**	Dima Nabutovsky
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Attachments:	bag14.png
Severity:	S3-Major



"There is no accessibility button to help people with disabilities understand the issue."

Description:

Thecustom 404 error page (Page Not Found) lacks accessibility features. There is no clear guidance or "Help/Support" shortcut for users with disabilities who may struggle to navigate back to a functional part of the site. Furthermore, the error messages are not optimized for Screen Readers, providing no context on what went wrong.

- URL: https://www.shein.com/404 (or any non-existent URL)

Steps to Reproduce:

1. Navigate to a non-existent page on the site (e.g., shein.com/this-page-does-not-exist).
2. Activate a Screen Reader (like NVDA or VoiceOver).
3. Observe if the error message is announced automatically.
4. Look for any accessibility help button or a direct link to customer support.

Expected Result:

1. The Screen Reader should immediately announce the error (using role="alert" or aria-live="assertive").
2. The page should include a clear "Need Help?" button or a direct link to a human representative/accessibility-focused FAQ.

Actual Result:

The page displays a generic graphic and a "Back to Home" button. There is no specialized assistance for users with disabilities, and the Screen Reader remains silent or provides minimal information.

[SHEIN-31] Missing "Unsaved Changes" warning: Data is lost when navigating away from an unsaved form Created: 25/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S4 - Minor
Reporter:	Dima Nabutovsky	**Assignee:**	Dima Nabutovsky
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	□S4-Minor

Description:

Theapplication fails to prompt the user with a confirmation dialog before navigating away from a page with unsaved changes. This leads to unintentional data loss and a poor user experience, as the user is not warned that their progress will be discarded.

- URL: https://www.shein.com/user/address

Steps to Reproduce:

1. Navigate to a page with an editable form (e.g., "Edit Profile" or "Add New Address").
2. Modify one or more fields (e.g., change the phone number or street name).
3. Do NOT click "Save".
4. Click on a link in the header/footer to navigate to another page, or click the browser's Back button.
5. Observe if a confirmation dialog appears.

Expected Result:
A browser native alert or a custom modal should appear, stating: "You have unsaved changes. Are you sure you want to leave this page?" with options to Stay or Leave.

Actual Result:
The browser navigates directly to the new page without any warning, and all the entered data is lost.

[SHEIN-30] Quantity field silently ignores "0" input without user feedback Created: 25/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S4 - Minor
Reporter:	Dima Nabutovsky	**Assignee:**	Dima Nabutovsky
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Attachments:	bag13.png
Severity:	S5- Low

Description:

IntheShopping Cart/Product page, the quantity input field does not allow the user to type the digit "0". While the intention might be to prevent invalid quantities, the lack of an error message or an alternative action (like auto-removing the item) creates a confusing experience where the keyboard input simply fails to respond.

- URL: https://www.shein.com/cart

Steps to Reproduce:

1. Add any item to the cart.
2. Go to the Cart page.
3. Click on the Quantity input field.
4. Attempt to manually type the number "0" using the keyboard.
5. Observe the field's behavior.

Expected Result:

The system should either:

1. Allow the input and display a validation message ("Quantity must be at least 1").
2. Allow the input and change the "Update" button to "Remove".
3. If blocked, show a tooltip explaining why "0" cannot be entered.

Actual Result:

The field remains unchanged. There is no visual feedback or message explaining why the "0" keypress is being ignored.

[SHEIN-29] Browser "Back" button fails to restore previous filter state (History API Issue) Created: 25/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S3- Major
Reporter:	Dima Nabutovsky	**Assignee:**	Dima Nabutovsky
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S4-Minor

Description:

The application does not preserve the filtering state in the browser history. After applying filters and subsequently clearing them, clicking the browser's "Back" button returns the user to the previous page (e.g., Homepage) instead of the previous filtered state within the category.

- URL: https://www.shein.com/category/

Steps to Reproduce:

1. Navigate to a category page.
2. Apply any filter (e.g., Color: Blue).
3. Clear the filter (e.g., by clicking "Clear All" or unchecking the box).
4. Click the browser's Back button.

Expected Result:

The browser should return to the state where the filter (Color: Blue) was active. The URL should reflect the previous parameters, and the product list should be filtered accordingly.

Actual Result:

The system ignores the filtered state and navigates completely out of the current view to the previous URL in the history stack (e.g., the page visited before entering the category).

[SHEIN-28] Price: Low to High" sorting functionality is broken/ignored in category view Created: 25/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S3- Major
Reporter:	Dima Nabutovsky	**Assignee:**	Dima Nabutovsky
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Attachments:	bag11.png
Severity:	S3-Major

Description:

The sorting mechanism fails to reorder products based on their numerical price value. After selecting the "Price: Low to High" option from the sort menu, the product grid remains in its default state or follows an incorrect sequence (e.g., higher priced items appearing before cheaper ones).

- URL: https://www.shein.com/category/...

Steps to Reproduce:

1. Navigate to a product category (e.g., "Home & Kitchen").
2. Locate the Sort By dropdown menu.
3. Select Price: Low to High.
4. Compare the prices of the first 10 products displayed.

Expected Result:

The product list should refresh immediately, displaying the cheapest item first (e.g., 4 ILS) and continuing in ascending numerical order.

Actual Result:

The order is inconsistent. Products are displayed in an unorganized fashion (e.g., 25 ILS $\rightarrow$ 10 ILS $\rightarrow$ 45 ILS), or they follow an alphabetical sort (15 before 4) as previously noted.

[SHEIN-27] Price slider exhibits extreme sensitivity and illogical price jumps (e.g., up to 24,000 ILS)
Created: 25/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S3- Major
Reporter:	Dima Nabutovsky	**Assignee:**	Dima Nabutovsky
Resolution:	Unresolved	**Votes:**	0
Labels:	None

Price Range
Oooops!
No item matched. Please try with other options.
Go Back
The price shows unrealistic prices even with a slight movement.

Description:

The priceslider in the category view is not correctly mapped to the actual price range of the products. A minor adjustment to the slider handle causes an exponential and illogical jump in price values (reaching 24,000 ILS), which does not reflect the actual inventory prices in this category.

- URL: https://www.shein.com/category/...

Steps to Reproduce:

1. Navigate to a standard product category (e.g., "T-shirts" or "Home Decor").
2. Locate the Price Slider in the filter sidebar.
3. Slowly drag the maximum price handle slightly to the right.
4. Observe the numerical price indicator above/beside the slider.

Expected Result:

The slider should have a linear and logical scale based on the products in the category. Small movements should result in small price increments (e.g., 50 ILS $\rightarrow$ 60 ILS), and the maximum limit should match the most expensive item in that specific category.

Actual Result:

The slider is hyper-sensitive. A tiny movement jumps from reasonable prices (e.g., 100 ILS) directly to extreme, irrelevant values like 24,000 ILS.

[SHEIN-26] Price sorting is inconsistent and follows alphabetical order instead of numerical value

When I try to sort by 'price: Low to High',
the results are not in the correct order."

Description:

Inthe categoryview, after applying a price filter or attempting to sort by "Price: Low to High," the results are displayed in an illogical sequence. For example, a product priced at 15 ILS appears before a product priced at 4 ILS. This suggests the system is sorting prices as strings rather than numeric values. Additionally, the price slider range does not dynamically update to reflect the actual minimum and maximum prices in the category.

Steps to Reproduce:

1. Navigate to a specific category (e.g., "Accessories").
2. Select the Sort by: Price Low to High option.
3. Examine the price sequence of the first 10 products.
4. Observe the Price Slider limits and compare them to the cheapest and most expensive items visible.

Expected Result:

1. Products should be sorted numerically: 4 ILS $\rightarrow$ 15 ILS $\rightarrow$ 17 ILS.
2. 2. The Price Slider's minimum value should match the lowest priced item in the category, and the maximum should match the highest.

Actual Result:

The sort order is broken: 15 ILS appears before 4 ILS (Lexicographical sorting).
2. The slider displays a generic range (e.g., 0-500) even if all products in the category cost between 4-20 ILS.

[SHEIN-25] Price Slider filter is inaccurate: Products exceed the maximum threshold set by the slider

DIYIE
"The price slider isn"t working properly; the set price doesn't match th actual results."

Description:

The price slider component fails to accurately filter products according to the selected range. When dragging the slider to a specific maximum value (e.g., 40 ILS), the results grid includes products with higher prices (e.g., 50 ILS), rendering the visual filter ineffective.

- URL: https://www.shein.com/category

Steps to Reproduce:

1. Navigate to any product category with a high volume of items.
2. Locate the Price Slider in the filter menu.
3. Drag the right handle (Maximum Price) to exactly 40 ILS.
4. Wait for the live update (or click "Apply" if required).
5. Examine the prices of the first 20 products in the results.

Expected Result:

The results should be strictly capped at the selected price. No product priced above 40 ILS should be displayed.

Actual Result:

The filter is "leaky"—products priced at 50 ILS and above appear in the list, despite the slider being set to a lower limit.

[SHEIN-24] Filter Inconsistency: Selecting "Black" color filter returns "No results found" despite available stock Created: 25/Feb/26 Updated: 25/Feb/26

He didn"t find a black t'shirt. without the filter there is a black t-shirt.
Ooops!
No item matched. Please try with other options.
Go Back

Description:

The colorfilter functionality is providing incorrect results. When selecting the "Black" color filter, the system displays an empty state ("No products found"), even though multiple black items are clearly visible and available for purchase in the general category view.

Steps to Reproduce:

1. Navigate to a category (e.g., "Men's T-shirts") where black shirts are visible.
2. In the sidebar, locate the Color filter.
3. Select the Black checkbox.
4. Observe the results page.

Expected Result:

The page should refresh and display all available products tagged with the color "Black".

Actual Result:

The system displays an empty results page with a message: "Sorry, we couldn't find any results" (or similar), despite black shirts existing in the catalog.

"Even though I requested only pink product in size S, I'm getting results for shirts in other colors."

Description:

When applying multiple filters simultaneously (e.g., Color: Pink AND Size: S), the product list fails to filter correctly. While the size filter might work, the system continues to display products in various other colors, ignoring the specific color selection.

- URL: [Women T-shirt|SHEIN IL|https://il.shein.com/Women-T-Shirts-c-1738.htmlici=ilen_tab00navbar04menu01dir05&src_module=topcat&src_identifier=fc%3DAll%60sc%3DWomen%20Clothing%60tc%3DShop%20by%20Category%60oc%3DT-shir ts%60ps% 3Dtab00navbar04menu01dir05%60jc% 3Dreal_1738& adp=59960188&src_tab_page_id=page_home1772016069924&categoryJump=common:349600:shein:il_en:ios_!_0]

Steps to Reproduce:

1. Navigate to a product category (e.g., Women's Tops).
2. Open the Color filter and select Pink.
3. Open the Size filter and select S.
4. Scroll through the results and observe the product colors.

Expected Result:

The product grid should update to display only products that are both Pink AND available in Size S.

Actual Result:

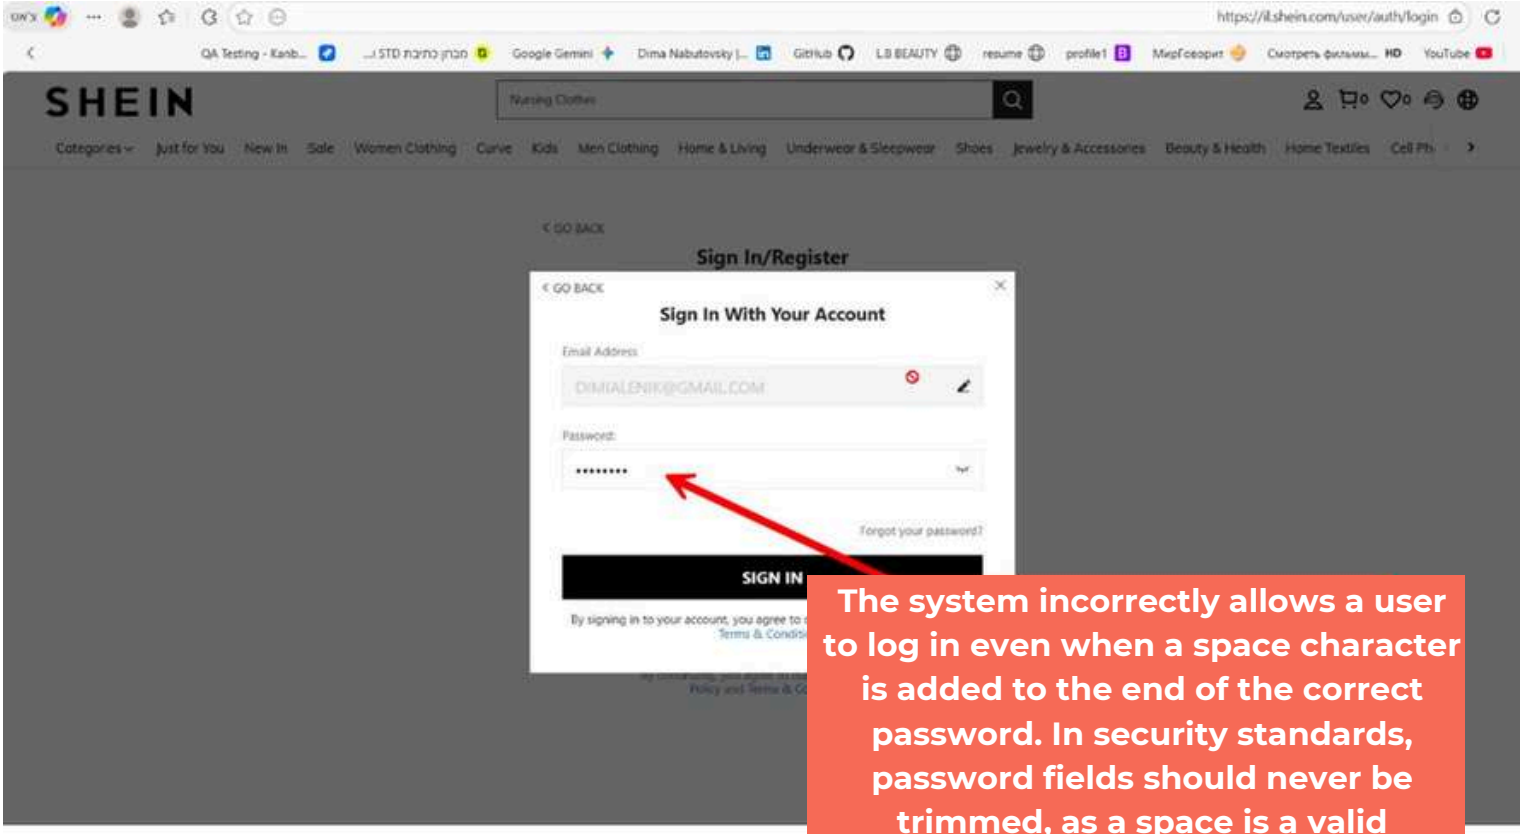
The results include shirts in multiple colors (Blue, Green, etc.) that are available in size S, but do not match the "Pink" color requirement.

[SHEIN-21] Security Flaw: Password field incorrectly trims trailing spaces during login Created: 25/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S3- Major
Reporter:	Dima Nabutovsky	**Assignee:**	Dima Nabutovsky
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Attachments:	bag6.png
Severity:	S3-Major



The system incorrectly allows a user to log in even when a space character is added to the end of the correct password. In security standards, password fields should never be trimmed, as a space is a valid character.

Description:

Thesystem fails to perform a strict string comparison for the password field. When a user appends a space character to the end of a correct password, the system ignores the space and grants access. In security standards, password fields must not be trimmed as a space is a valid and distinct character.

- URL: https://www.shein.com/user/auth/login

Steps to Reproduce:

1. Navigate to the Login page.
2. Enter a valid registered Email.
3. Enter the correct Password, but add a space at the very end (e.g., if the password is Shein2026, enter {{Shein2026 }}).
4. Click the "Sign In" button.

Expected Result:

The login attempt should be blocked. An "Invalid Credentials" error message should appear because the input string (including the space) does not match the stored password.

Actual Result:

The user is successfully logged into the account. The system is incorrectly trimming the password input before validation.

[SHEIN-20] System fails to send subsequent "Account Lock/Password" emails despite success message displayed to user Created: 25/Feb/26 Updated: 25/Feb/26

After three incorrect password attempts, a temporary password is sent via email. However, after one additional failed attempt, no further email is received despite a message stating it was sent. Furthermore, the previous temporary password no longer works.

Description:

IntheSHEIN login flow, after 3 failed attempts, the system triggers a password-related email. While the first email is received correctly, any subsequent failed attempts trigger a "Success" notification on the UI ("Email sent"), but no additional emails are delivered to the user's inbox.

- URL: https://www.shein.com/user/auth/login

Steps to Reproduce:

1. Navigate to the Login page.
2. Enter a valid email address and an incorrect password 3 times.
3. Verify that the first email (Reset/Alert) is received in the inbox.
4. Perform another failed login attempt (4th attempt).
5. Observe the UI message: It states that an email has been sent.
6. Check the inbox/spam folder for the second email.

Expected Result:

The UI should reflect the actual state. Either a second email is sent, or the UI should inform the user that an email was already sent recently and they should check their inbox before trying again (to avoid spamming).

Actual Result:

The UI displays a success message ("Email sent"), but no email is actually dispatched or received after the first one.

[SHEIN-18] Login process is not triggered by "Enter" key after entering credentials Created: 24/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN

Severity:	□S4-Minor

In the Login page, pressing the Enter key on the keyboard after filling in the email and password fields does not initiate the login process. The user is forced to manually click the "Sign In" button with the mouse to proceed.

- Navigate to the SHEIN Login page.
- Enter a valid (or invalid) email address in the Email field.
- Enter a password in the Password field.
- While the cursor is still focused on the Password field, press the Enter key on the keyboard.

Expected Result:
The form should be submitted, and the login process should be triggered (identical to clicking the "Sign In" button).

Actual Result:
Nothing happens. The page remains static, no validation is triggered, and the user stays on the login screen.

[SHEIN-17] Text overflow and layout breaking on small viewports (250px and below) Created: 23/Feb/26 Updated: 25/Feb/26

On resolution +250, cant see all the text

Description:

Whenresizingthebrowser to a width of 250px or less, text content (specifically product descriptions and titles) overflows its container boundaries. This results in a horizontal scrollbar and unreadable content.

- [Hauture Going Out Rhinestone Embellished Long Sleeve T-Shirts | SHEIN IL|https: //il.shein.com/Hauture-Going-Out-Rhinestone-Embellished-Long-Sleeve-T-Shirts-p-320438909.htmlsrc_identifier=on%3DCATEGORY_RECOMMEND_COMPONENT%60cn%3DCATEGORY_RECOMMEND_COMPONENT_1%60hz%3D-%60jc%3Dreal_1766%60ps%3D2_3_2&src_module=all&src_tab_page_id=page_home1771880211632&mallCode=1&pageListType=4&imgRatio=3-4&detailBusinessFrom=0-1_320438909%7C0-2&pageListType=4]

Steps to Reproduce:

1. Navigate to the homepage or a product page.
2. Open Developer Tools (F12).
3. Set the viewport width to 250px.
4. Observe the product titles and main text blocks.

Expected Result:

Text should wrap to the next line (word-wrap) or the container should adjust its size. If the screen is too narrow, the text should be truncated gracefully with an ellipsis (...) to maintain layout integrity.

Actual Result:

The text "leaks" out of the white container/div, overlapping the background or other UI elements. A horizontal scrollbar appears, which breaks the user experience.

[SHEIN-16] Banner overlapping (UI Collision) on viewports wider than 500px Created: 23/Feb/26 Updated: 25/Feb/26

Status:	To Do

SHE
Categories
On resolution +500, the banners stacked one on top of the other

Description:

Alayout regression occurs when the screen width reaches 500px and above. The homepage banners do not stack or resize correctly, causing them to overlap and obscure content/text.

- [Shop Trendy Women's Fashion Online | SHEINISRAEL|https: //il.shein.com/?_t=1771879513207&adid=72018220865250&cid=421885749&keyword=shein&matchtype=e&msclkid=940420ae85b31d3d3b6449323986a685&network=o&orderitemid=72018740374943&pf=bing&setid=1152289128242574&targetid=kwd-72018740374943%3Aloc-210&url_from=ilbingbrandshein_sheinshein02_20220509]

Steps to Reproduce:

1. Open the website on a desktop browser.
2. Open Developer Tools (F12) and toggle the Device Toolbar.
3. Set the width to 501px or drag the handle to increase resolution beyond 500px.
4. Observe the main banner section.

Expected Result:

Banners should maintain proper spacing, resize proportionally, or transition to a multi-column layout without overlapping.

Actual Result:

Banners "collide" and overlap each other, making the text unreadable and the call-to-action (CTA) buttons unclickable.

[SHEIN-15] Extreme performance degradation and slow page load times specifically on Firefox browser Created: 23/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S3- Major
Reporter:	Dima Nabutovsky	**Assignee:**	Dima Nabutovsky
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	□S3-Major

Description:

Thewebsite exhibits significant slowness and high latency during page transitions and initial load when using Mozilla Firefox. Other browsers (Chrome, Safari, Edge) perform as expected within reasonable load times.

Steps to Reproduce:

1. Open Mozilla Firefox.
2. Navigate to the website URL.
3. Observe the initial load time (LCP).
4. Click on any internal link (e.g., "Shop" or "Contact Us").
5. Compare the response time with Google Chrome.

Expected Result:

The page should load within the defined threshold (under 3 seconds) and maintain consistent performance across all supported browsers, including Firefox.

Actual Result:

The page takes significantly longer to load on Firefox (approx. 8-10 seconds). UI elements become unresponsive during the loading process.

[SHEIN-14] Inconsistency Between Product Description and Visuals Created: 22/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S3- Major

Jeta Ari

Description:

There is afundamental contradiction between the product's textual attributes (e.g., Material, Composition, Texture) and the visual evidence provided in the product images. The technical data is not properly synced with the specific SKU, resulting in misleading information regarding the item's physical proper ties.

Steps to Reproduce:

1. Navigate to http://shein.com .
2. Search for any product (e.g., "pants blue" or "Cotton Dress").
3. Open the Product Detail Page (PDP).
4. Compare the "Description" or "Details" section (Material, Composition, Pattern) with the provided Product Images.

Expected Result:

- The Product Description often lists attributes that contradict the visual evidence in the gallery.
- Example: A product image clearly shows a specific fabric texture (like Denim), but the description states a completely different composition (like 100% Silk).
- The "Composition" field does not reflect the visual quality of the item shown.

Actual Result:

- Verification: Every product listing must undergo a validation process to ensure the Product Description matches the Product.
- All technical specifications (Material, Stretch, Care Instructions) must be 100% accurate to the item shown in the images.
- Textual data should be synced correctly with the specific SKU to avoid misleading the customer.

[SHEIN-13] Search engine fails to recognize Emoji-based queries Created: 21/Feb/26 Updated: 25/Feb/26

Search engine fails to recognize Emoji-based queries
SHEIN MOD
SHEIN PETITE

Description:

The system does not map Emojis to their corresponding product categories or keywords (e.g., to "Dresses"). Instead, it returns a "No results" page or irrelevant items, failing to handle modern semantic input or provide a graceful fallback.

Steps to Reproduce:

1. Open the URL shein.com and Navigate to the search bar.
2. Enter a single, clear Emoji representing a product (e.g., for dresses or for heels).
3. Click the "Search" button.
4. Observe the results page.

Expected Result:

The search engine should be able to map common Emojis to their respective categories/keywords (e.g., should trigger a search for "Dresses") OR at the very least, handle the input gracefully without returning a broken results page.

Actual Result:

The system displays a "No results found" page or shows a list of completely unrelated items that do not match the Emoji's meaning.

[SHEIN-12] Search engine lacks "Did you mean" functionality for misspelled queries Created: 21/Feb/26 Updated: 27/Feb/26

SHEIN
Missing “Did you mean” suggestion for misspelled query
"Dres"
Hanevo
GLOWEVE
EMERY ROSE

Description:

The search engine fails to handle common misspellings (e.g., "Dres" instead of "Dress") and lacks a "Did you mean?" suggestion or an auto-correction mechanism. This leads to a "No results found" page, even for obvious typos of popular categories.

Steps to Reproduce:

1. Go to the SHEIN homepage.
2. In the search bar, type a commonly misspelled version of a popular product (e.g., "Dres" or "Sneakerss").
3. Click the Search button.
4. Observe the results page.

Expected Result:

The system should identify the typo and:
1. Display results for the corrected term: "Showing results for Dress. Search instead for Dres?"
2. OR Display a suggestion: "Did you mean: Dress?"

Actual Result:

The system displays a "No results found" or "0 results for 'Dres'" message. There is no suggestion (e.g., "Did you mean: Dress?") and no auto-correction.

Description:

The system allows the search to trigger even when the input field is completely empty, redirecting the user to a generic results page. It lacks basic front-end validation, such as disabling the search button or displaying a "Please enter a search term" message to prevent unnecessary server requests.

Steps to Reproduce:

1. Open the SHEIN homepage.
2. Ensure the search input field is completely empty.
3. Click the Search button and press "Enter" key.
4. Observe the results page.

Expected Result:

The system should prevent the search from executing.
It should either:
1. Keep the search button disabled if the field is empty.
2. Display an inline validation message: "Please enter a search term."
3. Stay on the current page and highlight the search bar.

Actual Result:

The system redirects to a results page showing a list of random/all products (e.g., "Results for "").

[SHEIN-10] Removing filer resets category results to default instead of maintaining current category search Created: 21/Feb/26 Updated: 27/Feb/26

The main page
Filters applied
SHEIN
dress
"Dress"
Trends
Aloruh
SHEIN EZwear
Chiquease

Description:

When a user clears applied filters (Size, Color, etc.) within a specific search (e.g., "black dress"), the system fails to maintain the search context. Instead of showing all "black dresses," it reverts the page to a previous state or a default category, breaking the user's search journey.

Steps to Reproduce:

1. Enter the URL shein.com and write in the search bar black dress and search .
2. Apply multiple filters: Size (e.g., 38), Color (e.g., Black), and Price Range.
3. Select "Clear filter" and observe that the page reverts to the items that were displayed before the search.

Expected Result:

The system should remove the applied filter and display all items in the current category and not revert to the original default subcategory

Actual Result:

The results revert to the previous search or default landing state

[SHEIN-9] Active filters are reset/cleared when performing a new search Created: 21/Feb/26 Updated: 27/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S4 - Minor

Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S3-Major

Description:

The system fails to maintain active filters (Color, Size, Price) when a user modifies the search term. Instead of the filters persisting across the new query, they are wiped out, forcing the user to re-select their preferences from scratch and breaking the shopping flow.

Steps to Reproduce:

1. Enter to the URL shein.com
2. Navigate to any category or search for an item (e.g., "Dress").
3. Apply several filters (e.g., Color: Red, Size: M, Price).
4. Verify the results are filtered correctly.
5. Go to the search bar write “red dress” and update the search term or click the search icon again.

Expected Result:

The selected filters should remain active (Persist) even after the search query is updated, unless the user manually clicks "Clear All".

Actual Result:

The search results update, but all previously selected filters are reset/cleared. The user has to select them again.

[SHEIN-8] Missing Account Lockout and Support Redirection after Multiple Failed Login Attempts

Created: 21/Feb/26 Updated: 27/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S3- Major
Reporter:	Yulia Rudenko	**Assignee:**	Yulia Rudenko
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	S2-Critical

Description:

The system fails to implement a lockout policy or a CAPTCHA after multiple failed login attempts. This vulnerability allows for potential Brute Force attacks, as a user (or bot) can repeatedly guess passwords or request reset codes without being blocked or throttled by the system.

Steps to Reproduce:

1. Enter to the URL shein.com
2. Navigate to the Login and enter an email yulia.rudenko1@gmail.com
3. Intentionally enter an incorrect password or request a reset code repeatedly
4. Observe that the system doesn't block you

Expected Result:

The account shloud be lock in

Actual Result:

You can repeatedly try to log in

[SHEIN-7] System fails to block or throttle users after multiple consecutive password reset attempts.
Created: 21/Feb/26 Updated: 25/Feb/26

Status:	To Do
Project:	SHEIN
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	S3- Major
Reporter:	Yulia Rudenko	**Assignee:**	Yulia Rudenko
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Severity:	□S3-Major

Description:

The system fails to throttle or block multiple consecutive requests for verification codes/reset emails. This allows a user to trigger an unlimited number of "Send Code" actions without encountering a cooldown period, CAPTCHA, or IP lockout, leading to potential Resource Exhaustion and a poor security posture (Email/SMS bombing).

Steps to Reproduce:

1. Open the URL https://il.shein.com/user/auth/login?direction=nav&f rom=navTop
2. Navigate to the Forgot Password / Login page.
3. Enter a valid email or phone number.
4. Click the "Send Code" / "Reset Password" button repeatedly (e.g., 10+ times in a row).
5. Observe if the system blocks the request or displays a "Too many attempts" message.

Expected Result:

The user should be temporarily blocked (e.g., for 15-30 minutes) or required to solve a Captcha after a specific number of attempts (e.g., 3-5 attempts). An error message should appear: "Too many attempts. Please try again later."

Actual Result:

The system continues to process every request and sends multiple verification codes/emails without blocking the user or the IP address.

[SHEIN-6] Password reset can be performed when entering an invalid email Created: 21/Feb/26 Updated: 27/Feb/26

Description:

The system fails to validate if an email address exists in the database before proceeding to the next step of the login/recovery flow. Instead of displaying an "Email not found" error, it redirects the user to a verification page, misleading them into thinking a code was sent to a non-existent account.

Steps to Reproduce:

1. Open URLhttps://il.shein.com/user/auth/login?direction=nav
2. Enter an email with a non existing email not_exists_12345@gmail.com
3. See that there is a message that a code has been sent

Expected Result:

The website does not allow you to proceed with the password recovery process

Actual Result:

the site is redirecting you to accepting a password in the non existing email

[SHEIN-5] excessively long email adresses with 256 characters is not accepted Created: 18/Feb/26 Updated: 25/Feb/26

Description:

The system accepts excessively long strings in the email input field (e.g., 250+ characters) and proceeds to the next step instead of triggering a validation error. This lack of character limits can lead to Buffer Overflow vulnerabilities or database errors when attempting to store such an oversized string.

Steps to Reproduce:

1. Open URLhttps://il.shein.com/user/auth/login?direction=nav
2. Enter an email aaaa

[SHEIN-4] Verification code sent to non-existent or incorrect phone number and email addresses

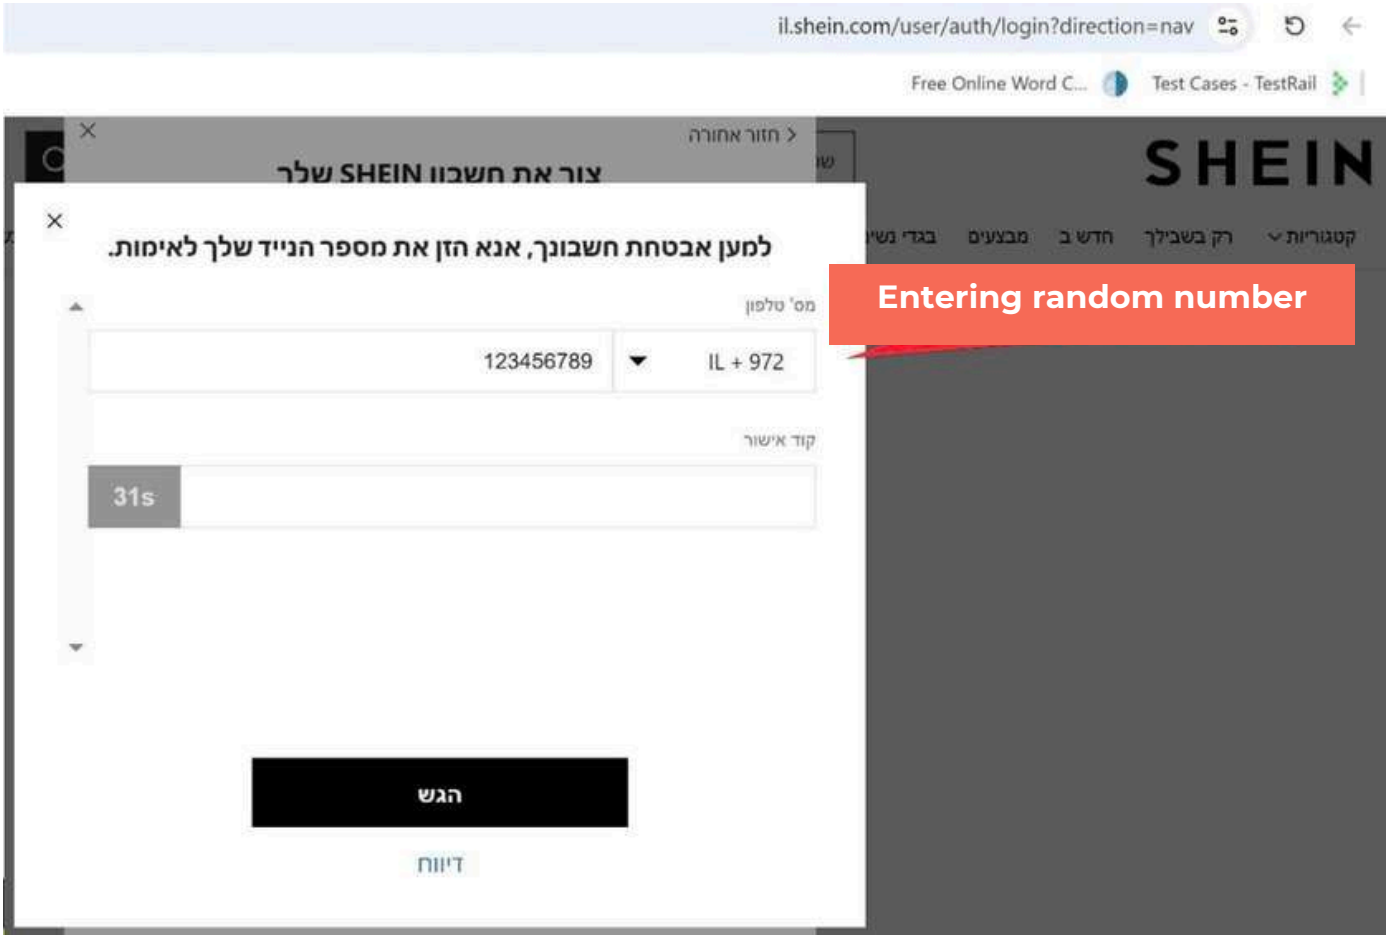
Entering an Email that doesn't exist allows you to continue



Entering random number

Description:

The system accepts email addresses with non-existent or fake domains (e.g., @dnvks.co.il) without performing a basic syntax or DNS check. Instead of flagging the email as invalid, the application proceeds to the password and phone number entry stages, allowing the creation of "ghost" accounts with unreachable credentials.

Steps to Reproduce:

1. Open URLSign In
2. Enter an email with a non existing domain yul@dnvks.co.il
3. See that the site is letting you enter a password and that redirecting you for entering a phone number

Expected Result:

The email in not excepted

Actual Result:

The email excepted

[SHEIN-3] System allows registration with an invalid email domain Created: 18/Feb/26 Updated: 27/Feb/26

The phone number is already linked on the website to another account with a diffrent email adress
הגש
דיווח

Description:

The system fails to enforce uniqueness constraints during the registration process. It allows a user to create a new profile using a non-existent email address while linking it to a phone number that is already registered to another active account. Instead of blocking the registration or prompting for a "Merge/Login," it creates a duplicate entry in the database.

Steps to Reproduce:

1. Oopen URL https://il.shein.com/user/auth/login?direction=nav&f rom=navTop
2. enter the email not_exit_12345@gmail.com
3. Enter the number '524039630' in the login screen
4. Complete the registration process and click "Register".
5. The system successfully logs the user in and creates/accesses a profile, completely ignoring the fact that the email does not exist and the phone number is already in use by another account.

Expected Result:

successfully logs the user in and creates/accesses a profile, completely ignoring the fact that the email does not exist and the phone number is already in use by another account.

Actual Result:

there is a message that the account is already in use
